WVDEP – Division of Water and Waste Managment GROUNDWATER PROTECTION PLAN FOR SMALL BUSINESSES

A Groundwater Protection Plan (GPP) for your business is required by WVDEP. The primary purpose of the GPP is to make the business operator aware that groundwater, by law, must be protected. Other important parts are the inventory of all operations (processes, materials, and other activities) that "may reasonably be expected to" contaminate groundwater, and a description of procedures to prevent potential contamination from occurring.

FACILITY NAME: FACILITY LOCATION:

The form below will be your GPP after you:

- 1. Read and understand each GPP section.
- 2. Fill in the information required box below each GPP section. Add extra sheets if necessary.
- 3. Attach a location map and a site diagram or plan showing the location of GPP elements.
- 4. Sign and date the GPP.

THE COMPLETED GPP MUST BE AVAILABLE ON SITE AT ALL TIMES (47CSR58, Section 4.12.c.)

GPP Section

Information Required

be expected to contaminate groundwater. 4.11.b. A description of procedures and facilities used to underground storage tanks, aboveground storage tanks (especially those with underground piping), waste piles, or raw material piles. Examples are secondary containment for aboveground tanks, underground piping, and drum storage areas. 4.11.b.1. – Manufacturing	4.11.a.

4.11.c. List procedures to be used when designing and adding new equipment or operations.	Examples may be the addition of loading docks for salt storage or fuel storage tanks at a facility. What structures and operating practices will be used to prevent groundwater contamination from these?
4.11.d. Summarize all activities at your facility that are already regulated for groundwater protection.	Examples would be the registration of underground storage tanks and the required groundwater monitoring, or the construction and use of a landfill and required groundwater monitoring.
