DETAILED PROCESS DESCRIPTION

The Toney Fork Surface Mine is located in a remote area of Buffalo Creek, Logan County, WV. The 2014 Powerscreen Warrior 1800 coal screening system will be used for direct-ship pit cleaned coal and may be moved and set up periodically to adjacent coal pits as material is uncovered.

The coal will be pit-cleaned and fed by front-end loader to bin BS-01(PW) @ TP-01(UD-PW); BS-01 will transfer to belt conveyor BC-01(NC) @ TP-02(TC-PE); coal from belt conveyor BC-01(NC) will transfer to screen SS-01(FE) @ TP-09(TC-FE). Screen material will then be sent to the under screen conveyor BC-02(FE) for distribution on any one of three belt conveyors BC-03(NC), BC-04(NC), or BC-05(NC) for transfer to the stockpiles OS-01(SW-WS), OS-02(SW-WS), and OS-03(SW-WS) @ TP-10(TC-PE) thru TP-15(TC-MDH). Stockpiles will then be loaded to truck and delivered to the appropriate loadout for delivery @ TP-16(LO-MDH). The screen will be housed in a fully enclosed screen box as depicted in the attached brochure.

Greenbrier Minerals proposes to install a portable water tank for use with the partially enclosed top end-loader fed bin. The feed bin will be used for coal transfer only and not storage.

ATTACHMENT C

DESCRIPTION OF FUGITIVE EMISSIONS

Potential sources of fugitive particulate emissions for this facility include emissions, which are not captured by pollution control equipment and emissions from open stockpiles and vehicular traffic on unpaved haulroads and work areas. The haulroads and work areas will be controlled by water truck in accordance with section E.6.c.i. of the General Permit. The stockpile areas will be controlled by water truck with pressurized pumps sufficient to control emissions. The water truck will be operated three times daily, and more as needed in dry periods.

An additive to prevent freezing will be utilized in the winter months when freezing conditions are present. New course rock base material will be added to unpaved haulroads as needed.
