Division of Air Quality Permit Application Submittal

Please find attached a permit application for :

[Company Name; Facility Location]

- DAQ Facility ID (for existing facilities only):
- Current 45CSR13 and 45CSR30 (Title V) permits associated with this process (for existing facilities only):
- Type of NSR Application (check all that apply):
 - \circ Construction
 - \circ Modification
 - Class I Administrative Update
 - Class II Administrative Update
 - \circ Relocation
 - Temporary
 - Permit Determination

- Type of 45CSR30 (TITLE V) Application:
 - Title V Initial
 - Title V Renewal
 - Administrative Amendment**
 - Minor Modification**
 - Significant Modification**
 - Off Permit Change

**If the box above is checked, include the Title V revision information as ATTACHMENT S to the combined NSR/Title V application.

- Payment Type:
 - Credit Card (Instructions to pay by credit card will be sent in the Application Status email.)
 - Check (Make checks payable to: WVDEP Division of Air Quality) Mail checks to: WVDEP – DAQ – Permitting Attn: NSR Permitting Secretary 601 57th Street, SE Charleston, WV 25304

Please wait until DAQ emails you the Facility ID Number and Permit Application Number. Please add these identifiers to your check or cover letter with your check.

APPLICATION FOR NSR PERMIT

WEST VIRGINIA DEPARTMENT OF ENVIRONMENTAL PROTECTION DIVISION OF AIR QUALITY 601 57 th Street, SE Charleston, WV 25304 (304) 926-0475 WWW.dep.wv.gov/daq	APPLICATION FOR NSR PERMIT AND TITLE V PERMIT REVISION (OPTIONAL)		
PLEASE CHECK ALL THAT APPLY TO NSR (45CSR13) (IF KNOWN CONSTRUCTION D MODIFICATION RELOCATION CLASS I ADMINISTRATIVE UPDATE TEMPORARY CLASS II ADMINISTRATIVE UPDATE AFTER-THE-FACT): PLEASE CHECK TYPE OF 45CSR30 (TITLE V) REVISION (IF ANY): □ ADMINISTRATIVE AMENDMENT □ MINOR MODIFICATION □ SIGNIFICANT MODIFICATION IF ANY BOX ABOVE IS CHECKED, INCLUDE TITLE V REVISION INFORMATION AS ATTACHMENT S TO THIS APPLICATION sion Guidance" in order to determine your Title V Revision options		
(Appendix A, "Title V Permit Revision Flowchart") and ability	to operate with the changes requested in this Permit Application.		
Section	I. General		
1. Name of applicant (as registered with the WV Secretary of TransGas Development Systems, LLC	State's Office):2. Federal Employer ID No. (FEIN):20343110		
3. Name of facility (if different from above):	4. The applicant is the:		
Adams Fork Harless Data Center Energy Campus	□ OWNER □ OPERATOR ⊠ BOTH		
5A. Applicant's mailing address:5B. Facility's present physical address:630 First Avenue, Suite 30C22 Mine RoadNew York, New York 10016-3799Holden, WV 25670			
 6. West Virginia Business Registration. Is the applicant a resident of the State of West Virginia? XES □ NO If YES, provide a copy of the Certificate of Incorporation/Organization/Limited Partnership (one page) including any name change amendments or other Business Registration Certificate as Attachment A. If NO, provide a copy of the Certificate of Authority/Authority of L.L.C./Registration (one page) including any name change amendments or other Business Certificate as Attachment A. 			
7. If applicant is a subsidiary corporation, please provide the na	ame of parent corporation: No		
 8. Does the applicant own, lease, have an option to buy or otherwise have control of the <i>proposed site</i>? □ YES □ NO If YES, please explain: Applicant has an option on the site with the current owner. If NO, you are not eligible for a permit for this source. 			
 Type of plant or facility (stationary source) to be construct administratively updated or temporarily permitted (e.g. crusher, etc.): Off-grid Power Generation 			
11A. DAQ Plant ID No. (for existing facilities only): 11B. List all current 45CSR13 and 45CSR30 (Title V) permit numbers associated with this process (for existing facilities only): New Facility New Facility			
All of the required forms and additional information can be found	under the Permitting Section of DAQ's website, or requested by phone.		

12A.

- For **Modifications**, Administrative Updates or **Temporary permits** at an existing facility, please provide directions to the *present location* of the facility from the nearest state road;
- For **Construction** or **Relocation permits**, please provide directions to the *proposed new site location* from the nearest state road. Include a **MAP** as **Attachment B**.

The facility will be located on the property at the Harless Industrial Park near Holden, West Virginia. The site can be accessed from U.S. Route 119 going South from Holden. Turn left onto 22 Mine Road. The proposed location is adjacent to Mohawk Industries.

12.B. New site address (if applicable):	12C. Nearest city or town:	12D. County:
Not Applicable	Holden	Mingo
12.E. UTM Northing (KM): 4,179.00211	12F. UTM Easting (KM): 401.42022	12G. UTM Zone: 17
13. Briefly describe the proposed change(s) at the This application is for the construction of the facili	-	
 14A. Provide the date of anticipated installation or If this is an After-The-Fact permit application, change did happen: / / 	5	14B. Date of anticipated Start-Up if a permit is granted: 01/01/2027
14C. Provide a Schedule of the planned Installation application as Attachment C (if more than or		e units proposed in this permit
15. Provide maximum projected Operating Sched 24Hours Per Day7Days Per We		cation:
16. Is demolition or physical renovation at an existi	ing facility involved? 🗌 YES 🛛 🛛 NC	
17. Risk Management Plans. If this facility is subj	ect to 112(r) of the 1990 CAAA, or will beco	me subject due to proposed
changes (for applicability help see www.epa.gov	//ceppo), submit your Risk Management P	an (RMP) to U. S. EPA Region III.
18. Regulatory Discussion. List all Federal and S	State air pollution control regulations that you	u believe are applicable to the
proposed process (if known). A list of possible a	pplicable requirements is also included in A	ttachment S of this application
(Title V Permit Revision Information). Discuss a	pplicability and proposed demonstration(s) of	of compliance (if known). Provide this
information as Attachment D.		
Section II. Additiona	l attachments and supporting	documents.
19. Include a check payable to WVDEP – Division of 45CSR13).		
20. Include a Table of Contents as the first page	of your application package.	
 Provide a Plot Plan, e.g. scaled map(s) and/or source(s) is or is to be located as Attachment 	r sketch(es) showing the location of the prop E (Refer to <i>Plot Plan Guidance</i>) .	perty on which the stationary
Indicate the location of the nearest occupied str	ructure (e.g. church, school, business, resid	ence).
22. Provide a Detailed Process Flow Diagram(s) device as Attachment F.	showing each proposed or modified emiss	ions unit, emission point and control
23. Provide a Process Description as Attachme	nt G.	
Also describe and quantify to the extent post Also describe and quantify to the extent post	ssible all changes made to the facility since	the last permit review (if applicable).
All of the required forms and additional information of	on he found under the Dermitting Section of I	

24. Provide Material Safety Data Sheets (MSDS) for all materials processed, used or produced as Attachment H.		
r> For chemical processes, provide a MS	DS for each compound emitt	ed to the air.
25. Fill out the Emission Units Table and provide it as Attachment I.		
26. Fill out the Emission Points Data Su	mmary Sheet (Table 1 and	Table 2) and provide it as Attachment J.
27. Fill out the Fugitive Emissions Data	Summary Sheet and provide	e it as Attachment K.
28. Check all applicable Emissions Unit	Data Sheets listed below:	
Bulk Liquid Transfer Operations	Haul Road Emissions	Quarry
Chemical Processes	Hot Mix Asphalt Plant	Solid Materials Sizing, Handling and Storage
Concrete Batch Plant	Incinerator	Facilities
Grey Iron and Steel Foundry	Indirect Heat Exchange	r 🖾 Storage Tanks
General Emission Unit, specify Engine	es 1 through 117.	
Fill out and provide the Emissions Unit D	ata Sheet(s) as Attachment	L.
29. Check all applicable Air Pollution Co	ntrol Device Sheets listed b	elow:
Absorption Systems	Baghouse	⊠ Flare
Adsorption Systems	Condenser	Mechanical Collector
Afterburner	Electrostatic Precip	itator 🗌 Wet Collecting System
Other Collectors, specify Control Syst	em	
Fill out and provide the Air Pollution Cont	trol Device Sheet(s) as Atta	chment M.
30. Provide all Supporting Emissions C Items 28 through 31.	alculations as Attachment I	N , or attach the calculations directly to the forms listed in
31. Monitoring, Recordkeeping, Reporting and Testing Plans. Attach proposed monitoring, recordkeeping, reporting and testing plans in order to demonstrate compliance with the proposed emissions limits and operating parameters in this permit application. Provide this information as Attachment O .		
	not be able to accept all me	nether or not the applicant chooses to propose such asures proposed by the applicant. If none of these plans clude them in the permit.
32. Public Notice. At the time that the a	pplication is submitted, place	a Class I Legal Advertisement in a newspaper of general
circulation in the area where the source is or will be located (See 45CSR§13-8.3 through 45CSR§13-8.5 and Example Legal		
Advertisement for details). Please si	ubmit the Affidavit of Public	ation as Attachment P immediately upon receipt.
33. Business Confidentiality Claims. Does this application include confidential information (per 45CSR31)?		
🖂 YES		
If YES, identify each segment of information on each page that is submitted as confidential and provide justification for each segment claimed confidential, including the criteria under 45CSR§31-4.1, and in accordance with the DAQ's " <i>Precautionary Notice – Claims of Confidentiality</i> " guidance found in the <i>General Instructions</i> as Attachment Q.		
See	ction III. Certification	n of Information
34. Authority/Delegation of Authority. Check applicable Authority Form bel		e other than the responsible official signs the application.
Authority of Corporation or Other Busin	ess Entity	Authority of Partnership
Authority of Governmental Agency		Authority of Limited Partnership
Submit completed and signed Authority Form as Attachment R.		
All of the required forms and additional info	rmation can be found under th	e Permitting Section of DAQ's website, or requested by phone.

35A. **Certification of Information.** To certify this permit application, a Responsible Official (per 45CSR§13-2.22 and 45CSR§30-2.28) or Authorized Representative shall check the appropriate box and sign below.

Certification of Truth, Accuracy, and Completeness

I, the undersigned Responsible Official / Authorized Representative, hereby certify that all information contained in this application and any supporting documents appended hereto, is true, accurate, and complete based on information and belief after reasonable inquiry I further agree to assume responsibility for the construction, modification and/or relocation and operation of the stationary source described herein in accordance with this application and any amendments thereto, as well as the Department of Environmental Protection, Division of Air Quality permit issued in accordance with this application, along with all applicable rules and regulations of the West Virginia Division of Air Quality and W.Va. Code § 22-5-1 et seq. (State Air Pollution Control Act). If the business or agency changes its Responsible Official or Authorized Representative, the Director of the Division of Air Quality will be notified in writing within 30 days of the official change.

Compliance Certification

Except for requirements identified in the Title V Application for which compliance is not achieved, I, the undersigned hereby certify that, based on information and belief formed after reasonable inquiry, all air contaminant sources identified in this application are in compliance with all applicable requirements.

BUSINESS CERTIFICATE

WEST VIRGINIA STATE TAX DEPARTMENT BUSINESS REGISTRATION CERTIFICATE

ISSUED TO: TRANSGAS DEVELOPMENT SYSTEMS, LLC 630 1ST AVE APT 30G NEW YORK, NY 10016-3799

BUSINESS REGISTRATION ACCOUNT NUMBER: 2218

2218-0756

This certificate is issued on: 06/29/2010

This certificate is issued by the West Virginia State Tax Commissioner in accordance with W.Va. Code § 11-12.

The person or organization identified on this certificate is registered to conduct business in the State of West Virginia at the location above.

This certificate is not transferrable and must be displayed at the location for which issued.

This certificate shall be permanent until cessation of the business for which the certificate of registration was granted or until it is suspended, revoked or cancelled by the Tax Commissioner.

Change in name or change of location shall be considered a cessation of the business and a new certificate shall be required.

TRAVELING/STREET VENDORS: Must carry a copy of this certificate in every vehicle operated by them. CONTRACTORS, DRILLING OPERATORS, TIMBER/LOGGING OPERATIONS: Must have a copy of this certificate displayed at every job site within West Virginia.

ATTACHMENT C

INSTALLATION AND STARTUP SCHEDULE

ATTACHMENT C

INSTALLATION AND START UP SCHEDULE

Construction of the facility will begin after receipt of Construction Permit from West Virginia Department of Environmental Protection, Division of Air Quality, and other necessary regulatory approvals on or near January 1, 2026. Operations will commence approximately 12 months after the beginning of construction.

ATTACHMENT D

REGULATORY DISCUSSION

ATTACHMENT D

REGULATORY DISCUSSION

The facility proposed herein, or portions of the facility, may be subject to the following regulations based on a review of potential air quality regulations (see No. 1 and 2). Additionally, there are a few regulations which the source may not be subject to which are also listed below in No. 3.

- 1. State Regulations
 - A. 45CSR4 "To Prevent and Control the Discharge of Air Pollutants into the Open Air Which Causes or Contributes to an Objectionable Odor or Odors"
 - B. 45CSR13 "Permits for Construction, Modification, Relocation and Operation of Stationary Sources of Air Pollutants, Notification Requirements, Temporary Permits, General Permits, and Procedures for Evaluation"
 - C. 45CSR16 "Standards of Performance for New Stationary Sources"
 - D. 45CSR20 "Good Engineering Practice as Applies to Stack Heights"
 - E. 45SCR30 "Requirements for Operation Permits"
 - F. 45CSR31 "Confidential Information" This application contains confidential information. This claim of confidentiality is made in accordance with the requirements of 45CSR31.
 - G. 45CSR34 "Emission Standards for Hazardous Air Pollutants"
- 2. Federal Regulations
 - A. 40CFR60 Subpart A General Provisions
 - B. 40CFR60 Subpart IIII Standard of Performance for Stationary Compression Ignition Internal Combustion Engines
 - C. 40CFR63, Subpart ZZZZ National Emissions Standard for Hazardous Air Pollutants for Stationary Reciprocating Internal Combustion Engines

- 3. Non-Applicable Regulations or Exemptions Apply
 - A. 45CSR40 Contol of Ozone Season Nitrogen Oxide Emissions
 - The reciprocating internal combustion engines proposed for this facility do not appear to be considered as a unit per the definition contained in section 2.30 where a unit is defined as a stationary fossil fuel-fired boiler, combustion turbine, or combined cycle system. The engines also have a maximum heat input of less than 250 MMBtu/hr as stated in Section 4.1. Furthermore, the units do not appear to be subject to 40CFR97.
 - B. 40CFR97, Subpart DDDDD CSAPR SO2 Group 2 Trading Program and Subpart EEEEE CSAPR Nox Ozone Season Group 2 Trading Program. The nameplate capacity of the generators attached to each unit is 25 MWe. Also, the units (reciprocating internal combustion engines) do not appear to be regulated by the rule.
 - C. 45CSR33 Acid Rain Provisions and Permits This rule does not appear to apply due to the New Unit Exemption in 40CFR72.
 - D. 40CFR72, Acid Rain Program, Subpart A, Section 72.7, New Unit Exemption, appears to exempt the units from applicability based on serving a generator of 25 MWe or less, not burning coal or coal-derived fuel, and burns fuel with sulfur of 0.05 percent or less by weight.
 - E. 40CFR60 Subpart Kc Standards of Performance for Volatile Organic Liquid Storage Vessels (Including Petroleum Liquid Storage Vessels) for which Construction, Reconstruction, or Modification Commenced After October 4, 2023. Does not apply due to low vapor pressure of diesel.

TANKS

- 1. Ultra Low Sulfur Diesel will be stored in 40 tanks located on the property near each powerhouse. The tanks are uncontrolled. The tank identification numbers are TK1 – TK40 (118S through 157S with emission points 118E through 157E).
- 2. Each powerhouse 1 through 39 will have one set of emission control fluid tanks for Hydrous Ammonia, Caustic Soda, Sulfuric Acid, Sodium Chloride, and Sodium Hydrosulfide. These tanks are de minimis.

ATTACHMENT F

PROCESS FLOW DIAGRAM(S)

ATTACHMENT G

PROCESS DESCRIPTION

ATTACHMENT G

PROCESS DESCRIPTION

The facility proposed herein is a unique, off-grid, electric generating facility designed to provide power to adjacent data center operations. The facility encompasses 117 engines (Source Numbers 1S through 117S) with 114 engines operating full-time and 3 engines in reserve. Each engine has a proposed control strategy (Control Numbers 1C through 117C) and vent through their own exhaust stack (Emissions Point 1E through 117E). The facility will contain 39 powerhouses with each containing 3 generator setups with each generator having a nameplate capacity of 25 MWe. Actual power generation will depend on the operating mode of the engines. The operating modes of the engines are more fully described in Attachment L. The control systems for each engine are described in Attachment M.

The engines will operate on ultra-low sulfur diesel and natural gas depending on the operating status. Ultra-low sulfur diesel will be stored in 40 tanks (TK1 through TK40, 118S-157S, 118E-157E) on the property. Natural gas will be delivered via pipeline. Tanks for control device liquids will be located at each powerhouse so there will be 39 tanks of each of hydrous ammonia, caustic soda, sulfuric acid, sodium chlorite, and sodium hydrosulfide. These tanks are considered de minimis. Liquids and supplies will be trucked to the site.

There is no steam-power production at the site. Cooling will be provided by mine pool water as needed; therefore, there is no requirement for cooling towers.

EMERGENCY OVERVIEW

Warning: Solution is highly alkaline Contains hydrogen sulfide, a highly toxic gas. Eye contact will cause marked eye irritation and possibly severe corneal damage. Skin contact will result in irritation and possible corrosion of the skin. Ingestion will irritate/burn mouth, throat and gastrointestinal tract. Contact with stomach acid will cause hydrogen sulfide vapors to be released. Heating or acid will cause hydrogen sulfide gas to evolve. Dilution of NaHS with water will also cause increased evolution of hydrogen sulfide.

Section 3: HAZARDS IDENTIFICATION, Cont.

3.1 POTENTIAL HEALTH EFFECTS

EYE: Contact with the eyes will cause marked eye irritation and possibly severe corneal damage.

SKIN CONTACT: Contact with the skin will cause skin irritation or burning sensation. Prolonged contact will result in corrosion of the skin.

SKIN ABSORPTION: Absorption is unlikely to occur.

INGESTION: Ingestion will result in severe burning and corrosion of mouth, throat and the gastrointestinal tract. If the ingested material contacts stomach acid, highly toxic hydrogen sulfide gas will be evolved.

INHALATION: Product solution and vapors contain highly toxic hydrogen sulfide gas. Exposure to this gas causes, headaches, nausea, dizziness and vomiting. Continued exposure can lead to loss of consciousness and death..

CHRONIC EFFECTS/CARCINOGENICITY: Not listed as a carcinogen by NTP, IARC or OSHA.

Section	4:	FIRST AID MEASURES	

4.1 EYES: Immediately flush with large quantities of water for 15 minutes. Hold eyelids apart during irrigation to insure thorough flushing of the entire area of the eye. Obtain immediate medical attention.

4.2 SKIN: Immediately flush with large quantities of water. Remove contaminated clothing under a safety shower. Obtain immediate medical attention

4.3 INGESTION: DO NOT INDUCE VOMITING. If victim is conscious, immediately give 2 to 4 glasses of water. If vomiting does occur, repeat fluid administration. Obtain immediate medical attention.

4.4 INHALATION: Remove victim from contaminated atmosphere. If breathing is labored, administer oxygen. If breathing has ceased, clear airway and start mouth to mouth resuscitation. If heart has stopped beating, external heart massage should be applied. Obtain immediate medical attention.

Section 5: FIRE FIGHTING MEASURES

5.1 FLAMMABLE PROPERTIES

FLASH POINT: Not flammable METHOD USED: NA

5.2 FLAMMABLE LIMITS Hydrogen sulfide LFL: 4% UFL: 44%

5.3 EXTINGUISHING MEDIA: Water spray or foam or as appropriate for combustibles involved in fire.

5.4 FIRE & EXPLOSIVE HAZARDS: Solution is non-flammable. However if these solutions are exposed to heat or acids, hydrogen sulfide will be released and may form explosive mixtures with air (see above).

Keep containers/storage vessels in fire area cooled with water spray. Heating may cause the release of hydrogen sulfide vapors.

Page 3

Section FIRE FIGHTING MEASURES (Cont.) 5:

5.5 FIRE FIGHTING EQUIPMENT: Because of the possible presence of toxic gases and the corrosive nature of the product, wear self-contained breathing apparatus, pressure demand, MSHA/NIOSH (approved or equivalent) and full protective gear.

Section ACCIDENTAL RELEASE MEASURES 6:

6.1 Small releases: Confine and absorb small releases on sand earth or other inert absorbent. Oxidize residual reactive sulfides with a weak (3-5%) hydrogen peroxide solution.

6.2 Large releases: Wear proper protective equipment. Confine area to qualified personnel. Shut off release if safe to do so. Dike spill area to prevent runoff into sewers, drains (potential explosive mixtures of hydrogen sulfide in confined spaces) or surface waterways (potential aquatic toxicity). Recover as much of the solution as possible. Treat remaining material as a small release (above).

Section 7: **HANDLING and STORAGE**

7.1 Handling: Wear proper protective equipment (See Section 8). Avoid breathing product vapors. Avoid contact with skin and eyes. Use only in a well ventilated area. Dilute product only in enclosed containers. Wash thoroughly after handling.

7.2 Storage: Store in well ventilated areas. Do not store combustibles in the area of storage vessels. Keep away from any sources of heat or flame. Store tote and smaller containers out of direct sunlight at moderate temperatures [<80° F (27° C)]. (See Section 10.4 for materials of construction)

Section 8: **EXPOSURE CONTROLS, PERSONAL PROTECTION**

8.1 **RESPIRATORY PROTECTION:** If working near open container or storage vessel opening or open tank truck dome cover, wear self-contained breathing apparatus, pressure demand, MSHA/NIOSH (approved or equivalent).

8.2 SKIN PROTECTION: Neoprene rubber gloves, chemical suit and boots should be worn to prevent contact with the liquid. Wash contaminated clothing prior to reuse. Contaminated leather shoes cannot be cleaned and should be discarded.

8.3 EYE PROTECTION: Chemical goggles and a full face shield.

8.4 EXPOSURE GUIDELINES:

	OSHA		A	CGIH
	TWA	STEL	TLV	STEL
Hydrogen sulfide	20 ppm (ceiling)		10 ppm	(ceiling)

8.5 ENGINEERING CONTROLS: Use adequate exhaust ventilation to prevent inhalation of product vapors. Where feasible scrub process or storage vessel vapors with caustic solution. Maintain eyewash/safety shower in areas where chemical is handled.

Page 4.

Section 9: PHYSICAL and CHEMICAL PROPERTIES

9.1	APPEARANCE:	Yellow to dark green liquid.
9.2	ODOR:	Strong hydrogen sulfide (rotten egg) odor.
9.3	BOILING POINT:	253 °F(122.8 °C) - 269 °F (131.7 °C)
9.4	VAPOR PRESSURE:	17 mm Hg @ 68 °F (20 °C)
9.5	VAPOR DENSITY: (Air = 1.0)	1.17
9.6	SOLUBILITY IN WATER:	Complete
9.7	SPECIFIC GRAVITY:	1.152 - 1.303 (9.6 - 10.9 lbs/gal)
9.8	FREEZING POINT:	0° F (-17.8° C) - 20%
		56° F (13.3° C) - 45%
9.9	pH:	11.5 - 12.5
9.10	VOLATILE:	Not applicable

Section 10: STABILITY and REACTIVITY

10.1 STABILITY: This is a stable material

10.2 HAZARDOUS POLYMERIZATION: Will not occur.

10.3 HAZARDOUS DECOMPOSITION PRODUCTS: Heating this product will evolve hydrogen sulfide. Fire conditions will also cause the production of sulfur dioxide. Hydrogen sulfide (4-44%) may form flammable mixtures with air.

10.4 INCOMPATIBILITY: <u>Acids</u> will cause the release of highly toxic hydrogen sulfide. <u>Sodium hydrosulfide</u> <u>solution is not compatible with copper, zinc, aluminum or their alloys</u> (i.e. bronze, brass, galvanized metals, etc.). Corrosive to steel above 150° F (65.5° C). These materials of construction should not be used in handling systems or storage containers for this product (SEE Section 7.2, Storage). Dilution of NaHS with water will increase the evolution of hydrogen sulfide. Dilution should be done in an enclosed container.

Section 11: TOXICOLOGICAL INFORMATION

- 11.1 ORAL: Data not available
- 11.2 DERMAL: Data not available
- 11.3 INHALATION: INH-RAT LC₅₀: 444 ppm (hydrogen sulfide) INH-MOUSE LC₅₀: 1,500 mg/m³ 18 minutes INH-RAT LC₅₀: 1,500 mg/m³ 14 minutes
- 11.4 CHRONIC/CARCINOGENICITY: No evidence available
- 11.5 TERATOLOGY: Data not available
- 11.6 REPRODUCTION: Data not available
- 11.7 MUTAGENICITY: Data not available

Section 12: ECOLOGICAL INFORMATION

Static acute 96 hour-LC₅₀ for mosquito fish is 206 mg/L. (TI_m - fresh water)

 LC_{50} fly inhalation 1,500 mg/m³, 7 minutes

TL_m Gammarus 0.84 mg/L, 96 hours (hydrogen sulfide)

TL_m Ephemera 0.316 mg/L, 96 hours (hydrogen sulfide)

TL_m Flathead minnow 0.071 – 0.55 mg/L @ 6-24°C, 96 hour flow through bioassay (hydrogen sulfide)

TL_m Bluegill 0.0090 – 0.0140 mg/L @ 20-22°C, 96 hour flow through bioassay (hydrogen sulfide)

TL_m Brook trout 0.0216 – 0.0308 mg/L @ 8-12.5°C, 96 hour flow through bioassay (hydrogen sulfide)

Section 13: DISPOSAL CONSIDERATIONS

If released to the environment for other than its intended purpose, this product contains some reactive sulfides which may be in sufficient quantity to meet the definition of a D003, hazardous waste.

Section 14: TRANSPORT INFORMATION

14.1 DOT Shipping Name:	Corrosive liquids, toxic, n.o.s.
14.2 DOT Hazard Class:	8
14.3 UN/NA Number:	UN2922 UN2949 (IMDG - over water)
14.4 Packing Group:	II
14.5 DOT Placard:	Corrosive
14.6 DOT Label(s):	Corrosive Toxic
14.7 IMO Shipping Name:	Sodium hydrosulphide solution
14.8 RQ (Reportable Quantity):	5,000 lbs (2268 Kg) 100% basis [2,604 gal (20%) 1,019 gal (45%)]
14.9 RR STCC Number:	28-123-33/49-352-04 (international)

Section 15: REGULATORY INFORMATION

15.1 OSHA:	This product is listed as a hazardous material under criteria of the OSHA Hazard Communication Standard, 29 CFR 1910.1200.	ne Federal
15.2 SARA TITLE III: a.	EHS (Extremely Hazardous Substance) List:	No

SAFETY DATA SHEET according to Regulation (EC) No. 1907/2006

Version 7.11 Revision Date 15.10.2024 Print Date 16.10.2024 GENERIC EU MSDS - NO COUNTRY SPECIFIC DATA - NO OEL DATA

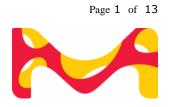

SECTION 1: Identification of the substance/mixture and of the company/undertaking				
1.1	Product identifiers Product name	:	Sodium chlorite (25% solution in water) for synthesis	
	Product Number Catalogue No. Brand	:	8.14815 814815 Millipore	
	UFI	:	CW60-J6H9-Q99X-S01A	
	REACH No.	:	This product is a mixture. REACH Registration Number see section 3.	
1.2	Relevant identified uses of the substance or mixture and uses advised against			
	Identified uses	:	Chemical for synthesis	
1.3	Details of the supplier of the safety data sheet			
	Company	:	Sigma-Aldrich Chemical Pvt Limited Industrial Area, Anekal Taluka Plot No 12, 12 Bommasandra - Jigani Link Road 560100 BANGALORE INDIA	
1.4	Emergency telephone			
	Emergency Phone #	:	000 800 1007 141 (CHEMTREC)	

SECTION 2: Hazards identification

2.1	Classification of the substance or Corrosive to Metals, (Category 1)	mixture H290: May be corrosive to metals.
	Acute toxicity, (Category 4)	H302: Harmful if swallowed.
	Acute toxicity, (Category 3)	H311: Toxic in contact with skin.
	Skin corrosion, (Category 1)	H314: Causes severe skin burns and eye damage.
	Serious eye damage, (Category	H318: Causes serious eye damage.

Millipore- 8.14815

The life science business of Merck operates as MilliporeSigma in the US and Canada

H373: May cause damage to organs through prolonged or repeated exposure.
H400: Very toxic to aquatic life.
H410: Very toxic to aquatic life with long lasting effects.

2.2 Label elements

Labelling according Regulation (EC) No 1272/2008

Pictogram

Signal Word	Danger	
Hazard Statements H290 H302 H311 H314 H373 H410	May be corrosive to metals. Harmful if swallowed. Toxic in contact with skin. Causes severe skin burns and eye damage. May cause damage to organs (spleen) through prolonged or repeated exposure. Very toxic to aquatic life with long lasting effects.	
Precautionary Statements

2.3 Other hazards

This substance/mixture contains no components considered to be either persistent, bioaccumulative and toxic (PBT), or very persistent and very bioaccumulative (vPvB) at levels of 0.1% or higher.

Ecological information:

The substance/mixture does not contain components considered to have endocrine disrupting properties according to REACH Article 57(f) or Commission Delegated regulation (EU) 2017/2100 or Commission Regulation (EU) 2018/605 at levels of 0.1% or higher. Toxicological information:

The substance/mixture does not contain components considered to have endocrine disrupting properties according to REACH Article 57(f) or Commission Delegated regulation (EU) 2017/2100 or Commission Regulation (EU) 2018/605 at levels of 0.1% or higher.

SECTION 3: Composition/information on ingredients

3.2 Mixtures

Component		Classification	Concentration

*A registration number is not available for this substance as the substance or its use are exempted from registration according to Article 2 REACH Regulation (EC) No 1907/2006, or the annual tonnage does not require a registration.

For the full text of the H-Statements mentioned in this Section, see Section 16.

SECTION 4: First aid measures

4.1 Description of first-aid measures

General advice

First aiders need to protect themselves. Show this material safety data sheet to the doctor in attendance.

If inhaled

After inhalation: fresh air. Call in physician.

Millipore- 8.14815

Page 3 of 13

The life science business of Merck operates as MilliporeSigma in the US and Canada

In case of skin contact

In case of skin contact: Take off immediately all contaminated clothing. Rinse skin with water/ shower. Call a physician immediately.

In case of eye contact

After eye contact: rinse out with plenty of water. Immediately call in ophthalmologist. Remove contact lenses.

If swallowed

After swallowing: make victim drink water (two glasses at most), avoid vomiting (risk of perforation). Call a physician immediately. Do not attempt to neutralise.

4.2 Most important symptoms and effects, both acute and delayed

The most important known symptoms and effects are described in the labelling (see section 2.2) and/or in section 11

4.3 Indication of any immediate medical attention and special treatment needed No data available

SECTION 5: Firefighting measures

5.1 Extinguishing media

Suitable extinguishing media Use extinguishing measures that are appropriate to local circumstances and the surrounding environment.

Unsuitable extinguishing media

For this substance/mixture no limitations of extinguishing agents are given.

5.2 Special hazards arising from the substance or mixture

Hydrogen chloride gas Sodium oxides Not combustible. Fire may cause evolution of: Hydrogen chloride gas Ambient fire may liberate hazardous vapours.

5.3 Advice for firefighters

Stay in danger area only with self-contained breathing apparatus. Prevent skin contact by keeping a safe distance or by wearing suitable protective clothing.

5.4 Further information

Suppress (knock down) gases/vapors/mists with a water spray jet. Prevent fire extinguishing water from contaminating surface water or the ground water system.

SECTION 6: Accidental release measures

- 6.1 Personal precautions, protective equipment and emergency procedures Advice for non-emergency personnel: Do not breathe vapors, aerosols. Avoid substance contact. Ensure adequate ventilation. Evacuate the danger area, observe emergency procedures, consult an expert. For personal protection see section 8.
- **6.2 Environmental precautions** Do not let product enter drains.

Millipore- 8.14815

Page 4 of 13

6.3 Methods and materials for containment and cleaning up

Cover drains. Collect, bind, and pump off spills. Observe possible material restrictions (see sections 7 and 10). Take up carefully with liquid-absorbent material (e.g. Chemizorb®). Dispose of properly. Clean up affected area.

6.4 Reference to other sections

For disposal see section 13.

SECTION 7: Handling and storage

7.1 Precautions for safe handling

Advice on safe handling

Work under hood. Do not inhale substance/mixture. Avoid generation of vapours/aerosols.

Hygiene measures

Immediately change contaminated clothing. Apply preventive skin protection. Wash hands and face after working with substance. For precautions see section 2.2.

7.2 Conditions for safe storage, including any incompatibilities

Storage conditions

No metal containers. No metal containers. Protected from light.Tightly closed. Keep in a well-ventilated place. Keep locked up or in an area accessible only to qualified or authorized persons. Do not store near acids.

Recommended storage temperature see product label.

Storage class

Storage class (TRGS 510): 6.1D: Non-combustible, acute toxic Cat.3 / toxic hazardous materials or hazardous materials causing chronic effects

7.3 Specific end use(s)

Apart from the uses mentioned in section 1.2 no other specific uses are stipulated

SECTION 8: Exposure controls/personal protection

8.1 Control parameters

Ingredients with workplace control parameters

8.2 Exposure controls

Personal protective equipment

Eye/face protection

Use equipment for eye protection tested and approved under appropriate government standards such as NIOSH (US) or EN 166(EU). Tightly fitting safety goggles

Skin protection

This recommendation applies only to the product stated in the safety data sheet, supplied by us and for the designated use. When dissolving in or mixing with other substances and under conditions deviating from those stated in EN 16523-1 please contact the supplier of CE-approved gloves (e.g. KCL GmbH, D-36124 Eichenzell, Internet: www.kcl.de).

Millipore- 8.14815

Full contact Material: Nitrile rubber Minimum layer thickness: 0,11 mm Break through time: 480 min Material tested:KCL 741 Dermatril® L

This recommendation applies only to the product stated in the safety data sheet, supplied by us and for the designated use. When dissolving in or mixing with other substances and under conditions deviating from those stated in EN 16523-1 please contact the supplier of CE-approved gloves (e.g. KCL GmbH, D-36124 Eichenzell, Internet: www.kcl.de). Splash contact Material: Nitrile rubber

Minimum layer thickness: 0,11 mm Break through time: 480 min Material tested:KCL 741 Dermatril® L

Body Protection

protective clothing

Respiratory protection

Recommended Filter type: Filter B-(P3)

The entrepeneur has to ensure that maintenance, cleaning and testing of respiratory protective devices are carried out according to the instructions of the producer. These measures have to be properly documented.

Control of environmental exposure

Do not let product enter drains.

SECTION 9: Physical and chemical properties 9.1 Information on basic physical and chemical properties

a)	Physical state	liquid
b)	Color	colorless
c)	Odor	weak
d)	Melting point/freezing point	Melting point: < -3 °C
e)	Initial boiling point and boiling range	ca.>= 100 °C at 1.013 hPa
f)	Flammability (solid, gas)	No data available
g)	Upper/lower flammability or explosive limits	No data available
h)	Flash point	Not applicable
i)	Autoignition temperature	Not applicable
j)	Decomposition temperature	No data available
k)	рН	ca.12 - 13 at 20 °C

Millipore- 8.14815

The life science business of Merck operates as MilliporeSigma in the US and Canada

Page 6 of 13

I)	Viscosity	Viscosity, kinematic: No data available Viscosity, dynamic: No data available
m)	Water solubility	at 20 °C soluble
n)	Partition coefficient: n-octanol/water	Not applicable
o)	Vapor pressure	ca.20 hPa at 20 °C
p)	Density	ca.1,2 g/cm3 at 20 °C
	Relative density	No data available
q)	Relative vapor density	No data available
r)	Particle	No data available

- s) Explosive properties Not classified as explosive.
- t) Oxidizing properties Oxidizing potential

9.2 Other safety information No data available

characteristics

SECTION 10: Stability and reactivity

10.1 Reactivity

explosible after loss of solvent content. Contact with acids liberates very toxic gas.

10.2 Chemical stability

The product is chemically stable under standard ambient conditions (room temperature) .

10.3 Possibility of hazardous reactions

Generates dangerous gases or fumes in contact with: Acids Release of: chlorine dioxide Violent reactions possible with: combustible substances Cvanides sulfur ammonium compounds phosphorus Organic Substances oxidisable substances Chlorine Metals in powder form Violent reactions possible with: Generates dangerous gases or fumes in contact with: Acids The generally known reaction partners of water.

Millipore- 8.14815

Page 7 of 13

The life science business of Merck operates as MilliporeSigma in the US and Canada

10.4 Conditions to avoid

no information available

10.5 Incompatible materials Contact with metals liberates hydrogen gas.Metals

10.6 Hazardous decomposition products In the event of fire: see section 5

SECTION 11: Toxicological information

11.1 Information on toxicological effects

Mixture

Acute toxicity

Acute toxicity estimate Oral - 1.114 mg/kg (Calculation method) Symptoms: If ingested, severe burns of the mouth and throat, as well as a danger of perforation of the esophagus and the stomach. Symptoms: Possible symptoms:, mucosal irritations, Cough, Shortness of breath, Possible damages:, damage of respiratory tract Acute toxicity estimate Dermal - 525,49 mg/kg (Calculation method)

Skin corrosion/irritation

No data available

Serious eye damage/eye irritation

Remarks: Mixture causes serious eye damage. Risk of blindness!

Respiratory or skin sensitization

No data available

Germ cell mutagenicity No data available

Carcinogenicity No data available

Reproductive toxicity

No data available

Specific target organ toxicity - single exposure

No data available

Specific target organ toxicity - repeated exposure

Mixture may cause damage to organs through prolonged or repeated exposure. - spleen

Aspiration hazard

No data available

11.2 Additional Information

Endocrine disrupting properties

Product:

Assessment

The substance/mixture does not contain components considered to have endocrine disrupting properties according to REACH Article

Millipore- 8.14815

The life science business of Merck operates as MilliporeSigma in the US and Canada

Page 8 of 13

57(f) or Commission Delegated regulation (EU) 2017/2100 or Commission Regulation (EU) 2018/605 at levels of 0.1% or higher.

Other dangerous properties can not be excluded.

Handle in accordance with good industrial hygiene and safety practice.

Components

sodium chlorite

Acute toxicity

LD50 Oral - Rat - male and female - 284 mg/kg (OECD Test Guideline 401) Acute toxicity estimate Oral - 284 mg/kg (ATE value derived from LD50/LC50 value) Inhalation: No data available LD50 Dermal - Rabbit - male and female - 134 mg/kg (US-EPA) Acute toxicity estimate Dermal - 134 mg/kg (ATE value derived from LD50/LC50 value)

Skin corrosion/irritation

Skin - Rabbit Result: Corrosive after 3 minutes to 1 hour of exposure - 4 h (US-EPA)

Serious eye damage/eye irritation

Eyes - Rabbit Result: Irreversible effects on the eye Remarks: Aqueous solution (ECHA)

Respiratory or skin sensitization

Maximization Test - Guinea pig Result: Does not cause skin sensitization. (OECD Test Guideline 406)

Germ cell mutagenicity

Method: OECD Test Guideline 475 Species: Mouse - male and female - Bone marrow Result: negative

Carcinogenicity

No data available

Reproductive toxicity

No data available

Specific target organ toxicity - single exposure No data available

Specific target organ toxicity - repeated exposure

May cause damage to organs through prolonged or repeated exposure. - spleen

Aspiration hazard

No data available

Millipore- 8.14815

SECTION 12: Ecological information

Mixture

12.1 Toxicity

No data available

- 12.2 Persistence and degradability No data available
- **12.3 Bioaccumulative potential** No data available
- **12.4 Mobility in soil** No data available

12.5 Results of PBT and vPvB assessment

This substance/mixture contains no components considered to be either persistent, bioaccumulative and toxic (PBT), or very persistent and very bioaccumulative (vPvB) at levels of 0.1% or higher.

12.6 Endocrine disrupting properties Product:

Assessment

: The substance/mixture does not contain components considered to have endocrine disrupting properties according to REACH Article 57(f) or Commission Delegated regulation (EU) 2017/2100 or Commission Regulation (EU) 2018/605 at levels of 0.1% or higher.

12.7 Other adverse effects

No data available

Components

sodium chlorite

Toxicity to fish	flow-through test LC50 - Cyprinodon variegatus (sheepshead minnow) - 105 mg/l - 96 h (US-EPA)
Toxicity to daphnia and other aquatic invertebrates	static test EC50 - Daphnia magna (Water flea) - < 1 mg/l - 48 h (OECD Test Guideline 202)
Toxicity to algae	static test ErC50 - Pseudokirchneriella subcapitata (green algae) - 21,5 mg/l - 72 h (OECD Test Guideline 201)
	static test EC10 - Pseudokirchneriella subcapitata (green algae) - 4,8 mg/l - 72 h (OECD Test Guideline 201)
Toxicity to bacteria	Respiration inhibition EC50 - activated sludge - > 100 mg/l - 3 h (OECD Test Guideline 209)

SECTION 15: Regulatory information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

This material safety data sheet complies with the requirements of Regulation (EC) No. 1907/2006.

National legislation

Seveso III: Directive 2012/18/EU of the E1 European Parliament and of the Council on the control of major-accident hazards involving dangerous substances.

ENVIRONMENTAL HAZARDS

Other regulations

Observe work restrictions regarding maternity protection in accordance to Dir 92/85/EEC or stricter national regulations where applicable.

Take note of Dir 94/33/EC on the protection of young people at work.

15.2 Chemical Safety Assessment

For this product a chemical safety assessment was not carried out

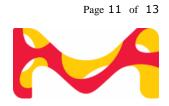

SECTION 16: Other information

Full text of H-Statements

H271	May cause fire or explosion; strong oxidizer.
H301	Toxic if swallowed.

Millipore- 8.14815

The life science business of Merck operates as MilliporeSigma in the US and Canada

Safety Data Sheet

Sulfuric Acid 36-37% (w/w)

1. PRODUCT AND COMPANY IDENTIFICATION

Product Name: Sulfuric Acid 36-37% (w/w)

Synonyms/Generic Names: Battery Acid, Dihydrogen Sulfate, Oil of Vitriol

Product Number: 9624

Product Use: Industrial, Manufacturing or Laboratory use

Manufacturer: Columbus Chemical Industries, Inc. N4335 Temkin Rd. Columbus, WI. 53925

For More Information: 920-623-2140 (Monday-Friday 8:00-4:30) www.columbuschemical.com

In Case of Emergency Call: CHEMTREC - 800-424-9300 or 703-527-3887 (24 Hours/Day, 7 Days/Week)

2. HAZARDS IDENTIFICATION

Hazard Not Otherwise Classified (HNOC): None

Signal Words: Danger

Pictograms:

GHS Classification:

Skin corrosion	Category 1A
Serious eye damage	Category 1
Acute aquatic toxicity	Category 3

GHS Label Elements, including precautionary statements:

Hazard Statements:

H314	Causes severe skin burns and eye damage.
H402	Harmful to aquatic life.

Precautionary Statements:

P260	Do not breathe mists.
P264	Wash hands thoroughly after handling.
P273	Avoid release to the environment.
P280	Wear protective gloves/protective clothing/eye protection/face protection.
P301+P330+P331	IF SWALLOWED: Rinse mouth. Do not induce vomiting.

P303+P361+P353	IF ON SKIN (or hair): Take off immediately all contaminated clothing. Rinse
	skin with water/shower.
	IF INHALED: Remove person to fresh air and keep comfortable for
P304+P340	breathing.
P305+P351+P338	IF IN EYES: Rinse cautiously with water for several minutes. Remove
	contact lenses, if present and easy to do. Continue rinsing.
P310	Immediately call a POISON CENTER/doctor/physician.
P363	Wash contaminated clothing before reuse.
P405	Store locked up.
P501	Dispose of contents/container in accordance with local regulations.

Potential Health Effects

Eyes	Causes severe eye burns.	
Inhalation	May be harmful if inhaled. Material is extremely destructive to the tissue of the mucous	
	membranes and upper respiratory tract.	
Skin	Causes skin burns.	
Ingestion	May be harmful if swallowed.	

NFPA Ratings

Health	3

3. COMPOSITION/INFORMATION ON INGREDIENTS

Component	Weight %	CAS #	EINECS# / ELINCS#	Formula	Molecular Weight
Sulfuric Acid	36-37	7664-93-9	231-939-5	H_2SO_4	98.08 g/mol
Water	Balance	7732-18-5	231-791-2	H ₂ O	18.00 g/mol

4. FIRST-AID MEASURES

Eyes	Immediately rinse with plenty of water for at least 15 minutes and get medical attention immediately.
Inhalation	Move casualty to fresh air and keep at rest. If breathing is difficult, give oxygen. If not breathing, give artificial respiration. Get medical attention immediately.
Skin	Immediately flush with plenty of water for at least 15 minutes while removing contaminated clothing and wash using soap. Get medical attention immediately.
Ingestion	Do Not Induce Vomiting! Never give anything by mouth to an unconscious person. If conscious, wash out mouth with water. Get medical attention immediately.

5. FIRE-FIGHTING MEASURES

Suitable (and unsuitable) extinguishing media	Product is not flammable. Use appropriate media for adjacent fire. Cool unopened containers with water.
Special protective equipment and precautions for firefighters	Wear self-contained, approved breathing apparatus and full protective clothing, including eye protection and boots.
Specific hazards arising from the chemical	Emits toxic fumes (sulfur oxides, hydrogen sulfide gas) under fire conditions. (See also Stability and Reactivity section).

6. ACCIDENTAL RELEASE MEASURES

Personal precautions, protective equipment and emergency procedures	See section 8 for recommendations on the use of personal protective equipment.
Environmental precautions	Prevent spillage from entering drains. Any release to the environment may be subject to federal/national or local reporting requirements.
Methods and materials for containment and cleaning up	Neutralize spill with sodium bicarbonate or lime. Absorb spill with noncombustible absorbent material, then place in a suitable container for disposal. Clean surfaces thoroughly with water to remove residual contamination. Dispose of all waste and cleanup materials in accordance with regulations.

7. HANDLING AND STORAGE

Precautions for safe handling

See section 8 for recommendations on the use of personal protective equipment. Use with adequate ventilation. Wash thoroughly after using. Keep container closed when not in use. Avoid formation of aerosols.

Conditions for safe storage, including any incompatibilities

Store in a cool, dry, well ventilated area. Keep away from incompatible materials (see section 10 for incompatibilities).

8. EXPOSURE CONTROLS / PERSONAL PROTECTION

Occupational exposure controls:

Component	Exposure Limits	Basis	Entity
Sulfuric Acid	0.2 mg/m ³	TLV	ACGIH
	1 mg/m ³	PEL	OSHA
	1 mg/m ³ `	REL	NIOSH
	15 mg/m ³	IDLH	OSHA

TWA: Time Weighted Average over 8 hours of work.

TLV: Threshold Limit Value over 8 hours of work.

REL: Recommended Exposure Limit

PEL: Permissible Exposure Limit

STEL: Short Term Exposure Limit during x minutes.

IDLH: Immediately Dangerous to Life or Health

WEEL: Workplace Environmental Exposure Levels

CEIL: Ceiling

Personal Protection

Eyes	Wear chemical safety glasses or goggles, and face shield.		
Inhalation	Provide local exhaust, preferably mechanical. If exposure levels are excessive, use an		
	approved respirator.		
Skin	Wear nitrile or rubber gloves, and full body suit. The type of protective equipment must be selected according to the concentration and amount of the dangerous substance at the specific workplace.		
Other	Not Available		

Other Recommendations

Provide eyewash stations, quick-drench showers and washing facilities accessible to areas of use and handling.

9. PHYSICAL AND CHEMICAL PROPERTIES

Appearance (physical state, color, etc.)	Clear, colorless liquid.
Odor	Odorless.
Odor threshold	Not Available
рН	~1
Melting point/freezing point	Not Available
Initial boiling point and boiling range	Not Available
Flash point	Not Flammable
Evaporation rate	Not Available
Flammability (solid, gas)	Not Flammable
Upper/lower flammability or explosive limit	Not Explosive
Vapor pressure	Not Available
Vapor density	Not Available
Specific gravity	1.2720
Solubility (ies)	Soluble in water.
Partition coefficient: n-octanol/water	Not Available
Auto-ignition temperature	Not Available
Decomposition temperature	Not Available

10. STABILITY AND REACTIVITY

Chemical Stability	Stable
Possibility of Hazardous Reactions	Will not occur.
Conditions to Avoid	Moisture.
Incompatible Materials	Bases, halides, organic material, carbides, chlorates, fulminates, nitrates, picrates, cyanides, cyclopentadiene, cyclopentanone oxime, nitroaryl amines, hexalithium disilicide, phosphorus (III) oxide, powdered metals.
Hazardous Decomposition Products	Sulfur oxides, hydrogen sulfide gas.

11. TOXICOLOGICAL INFORMATION

Acute Toxicity

Skin	Not Available
Eyes	Not Available
Respiratory	Not Available
Ingestion	Not Available

Carcinogenicity

IARC	1: Carcinogenic to humans (sulfuric acid aerosol).
ACGIH	A2: Suspected human carcinogen (sulfuric acid aerosol).
NTP	No components of this product present at levels greater than or equal to 0.1% is
	identified as a known or anticipated carcinogen by NTP.
OSHA	No components of this product present at levels greater than or equal to 0.1% is
	identified as a carcinogen or potential carcinogen by OSHA.

Signs & Symptoms of Exposure

Skin	Burning, itching, redness, inflammation upon exposed tissue.	
Eyes	Eye burns, watering eyes.	
Respiratory	Burning, choking, coughing, shortness of breath.	
Ingestion	Nausea, vomiting, diarrhea, burning, severe pain.	

Chronic Toxicity	May cause bleeding of nose and gums, nasal and oral mucosal ulceration, conjunctivitis, yellowing of teeth and erosion of tooth enamel.
Teratogenicity	Not Available
Mutagenicity	Not Available
Embryotoxicity	Not Available
Target Organ(s)	Teeth, Lungs
Reproductive Toxicity	Not Available
Respiratory/Skin Sensitization	Not Available

12. ECOLOGICAL INFORMATION

Ecotoxicity

Aquatic Vertebrate	Not Available	
Aquatic Invertebrate	Not Available	
Terrestrial	Not Available	
Persistence and Degradability		Not Available
Bioaccumulative Potential		Does not accumulate.
Mobility in Soil		Not Available
PBT and vPvB Assessment		Not Available
Other Adverse Effects		Not Available

13. DISPOSAL CONSIDERATIONS

Waste Product or Residues	Users should review their operations in terms of the applicable federal/national or local regulations and consult with appropriate regulatory agencies if necessary before disposing of waste product or residue.
Product Containers	Users should review their operations in terms of the applicable federal/national or local regulations and consult with appropriate regulatory agencies if necessary before disposing of waste product container.

The information offered in section 13 is for the product as shipped. Use and/or alterations to the product may significantly change the characteristics of the material and alter the waste classification and proper disposal methods.

14. TRANSPORTATION INFORMATION

US DOT	UN2796, Sulfuric acid, 8, pg II
TDG	UN2796, SULFURIC ACID, 8, PG II
IMDG	UN2796, SULFURIC ACID, 8, PG II
Marine Pollutant	No
IATA/ICAO	UN2796, Sulfuric acid, 8, pg II

15. REGULATORY INFORMATION

TSCA Inventory Status	All ingredients are listed on the TSCA Active
	inventory.
DSL / NDSL	All ingredients are listed on the DSL inventory.
California Proposition 65	Not Listed
Rhode Island: Hazardous Substance List	Listed: Sulfuric Acid

Massachusetts: Toxic or Hazardous Substance List,	Not Listed

SODIUM SHINTECH HYDROXIDE, 50%

SECTION 1 — CHEMICAL PRODUCT AND COMPANY IDENTIFICATION

Manufacturer:	Shintech Louisiana, LLC 3 Greenway Plaza, Suite 1150 Houston, TX 77046 (713) 965-0713
PRODUCT NAME:	Sodium Hydroxide Solution, 50%
CAS#:	1310-73-2
CHEMICAL FOMULA:	NaOH(50)
Synonyms	Caustic Soda Liquid 50%, Soda Lye, Lye, Liquid Caustic, Sodium Hydrate
Product Use:	Neutralizing agent, industrial cleaner, pulping and bleaching, soap manufacturing

For information regarding a chemical emergency involving a spill or leak, call:

24 — Hour Emergency Contact:

U.S.: 1-800-424-9300 — CHEMTREC

SECTION 2 — HAZARDS IDENTIFICATION

Global Harmonization System (GHS) Classification:

Category 1 Corrosive to metals
Category 1 Skin corrosion/irritation
Category 1 Serious eye damage/eye irritation
Category 3 Hazardous to the aquatic environment, long-term (chronic) hazard
Category 4 Acute toxicity, inhalation
Category 4 Acute toxicity, oral

SAFETY DATA SHEET SODIUM SODIUM HYDROXIDE, 50%

National Fire Protection Association (NFPA) Rating Hazardous Materials Identification Systems (HMIS) Rating

	NFPA	HMIS	
Health	3	3	4
Fire	0	0	3
Reactivity	1	1	2

4 = Extreme/Severe W – Water Reactive
3 = High/Serious
2 = Moderate
1 = Slight

0 = Minimum

DANGER! Causes severe eye burns. Causes severe skin burns. Avoid contact with skin and eyes. Causes burns of the mouth and throat. Causes respiratory tract irritation. Avoid breathing vapors or mist. Aspiration hazard. Can enter lungs and cause damage. May react with water. Keep upwind of spill and use in adequate ventilation.

Emergency Overview:

Color:	Colorless
Odor:	Odorless
Physical State	Liquid above freezing point
Signal Word	DANGER

GHS Label Elements:

GHS Hazard Statements:	H290 - May be corrosive to metals
	H314 – Causes severe skin burns and eye
	H318 – Causes serious eye damage
	H412 – Harmful to aquatic life with long lasting effects
	H332 – Harmful if inhaled
	H302 – Harmful if swallowed

Reviewed Date: 1/25/2023

Page 3 of 16

Storage:	Keep container closed.
	Keep in original container.
	Store in a secure manner.
Ventilation Controls:	Do not breathe (dust, vapor or spray mist).
Hygiene Measures:	When using, do not smoke, eat, or drink.
	Wash thoroughly after handling.
	Avoid contact with skin and eyes.
Personal Protective Equipment:	Wear suitable protective clothing, gloves, and eye/face protection.
Spills:	NEVER direct water jet on liquid.
	Dike the area to contain the spill.
	Collect in suitable and properly labeled containers.
	Attempt to neutralize by adding material such as Acetic acid.
First Aid (See Section 4):	In case of accident by inhalation, move person to fresh air.
	If swallowed, do not induce vomiting: seek medical advice immediately and show label to doctor.
	After contact with skin, immediately take off all contaminated clothing and wash immediately with plenty of water.
	In case of contact with eyes, rinse immediately with plenty of water.
	In all cases, if irritation develops and persists, get medical attention.
	In all cases, call a poison control center or doctor for further treatmen advice.
Environmental Protection:	Use appropriate containment to avoid environmental contamination.
Disposal:	Dispose of contents and container in accordance with applicable local, regional, national, and/or international regulations.

Page 4 of 16

POTENTIAL HEALTH EFFECTS:

EYE CONTACT	May cause severe irritation with corneal injury which may result in permanent impairment of vision, even blindness. Chemical burns may occur. Mist may cause eye irritation.	
Short Term Exposure		
Long Term Exposure:		
SKIN CONTACT	Brief contact may cause severe skin burns. Symptoms may include pain, severe local redness and tissue damage.	
SKIN ABSORPTION	Prolonged skin contact is unlikely to result in absorption of harmful amounts.	
INHALATION:	Mist may cause severe irritation of upper respiratory tract (nose and throat). May cause chemical burns to the respiratory tract.	
INGESTION	Swallowing may result in burns of the mouth and throat. Swallowing may result in gastrointestinal irritation, ulceration, nausea and/or vomiting. Aspiration into the lungs may occur during ingestion or vomiting, causing tissue damage or lung injury.	
CONDITIONS AGGRAVATED BY EXPOSURE	Respiratory disorders, pre-existing skin disorders, eye/vision disorders.	
TARGET ORGANS EFFECTED:	Skin, Eyes, Respiratory System.	

SECTION 3 – COMPOSITION/INFORMATION ON INGREDIENTS

Hazardous ingredients (specific)	Typical %	CAS Number	EC Number
Water	50	7732-18-5	7732-18-5
Sodium Hydroxide	50	1310-73-2	7732-18-5
Sodium Chloride	< 1	7647-14-5	231-598-3

Common Caustic Soda Liquid 50%, Soda Lye, Lye, Liquid Caustic, Sodium Hydrate Names/Synonyms:

Issue Date: 01/10/2011

Reviewed Date: 1/25/2023

Page 5 of 16

	SECTION 4 – FIRST AID MEASURES
Eye Contact:	Immediately flush eyes with water for at least 30 minutes, and up to 60 minutes if necessary. Hold eyelids open during flushing. If irritation persists, repeat flushing. Obtain medical attention IMMEDIATELY. Do not transport victim until the recommended flushing period is completed unless flushing can be continued during transport.
Skin Contact:	Immediately flush skin with water for at least 30 minutes, and up to 60 minutes if necessary. Under water remove contaminated clothing, jewelry, and shoes. If irritation persists, repeat flushing. Obtain medical attention immediately. Handle contaminated clothing and shoes in a manner which limits further exposure.
Ingestion:	DO NOT INDUCE VOMITING. If victim is alert and not convulsing, rinse mouth and give as much water as possible to dilute material (8 to 10 oz. or 240 to 300 mL). If spontaneous vomiting occurs, have victim lean forward with head down, rinse mouth and administer more water. IMMEDIATELY transport victim to an emergency facility. Do not give anything to an unconscious person.
Inhalation:	Move victim to fresh air. If breathing is difficult, oxygen may be beneficial if administered by trained personnel, preferably on a doctor's advice. Give artificial respiration ONLY if breathing has stopped. Do not use mouth-to- mouth method if victim ingested or inhaled the substance: induce artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. Obtain medical attention IMMEDIATELY. Symptoms of pulmonary edema can be delayed up to 48 hours after exposure.

Extinguishing Media:	This material does not burn. If exposed to fire from another source, use suitable extinguishing agent for that fire. Do not use water jet.
Fire Fighting Procedures:	Keep people away. Isolate fire and deny unnecessary entry. Remove containers from fire, if possible, and cool containers with water. When material comes in contact with water, large amounts of heat may be generated and ignite adjacent combustible materials. This material does not burn. Fight fire for other material that is burning.

SHINTE	SAFETY DATA SHEET SODIUM HYDROXIDE, 50%	Issue Date: 01/10/2011 Reviewed Date: 1/25/2023 Page 6 of 16
Special Protective	Wear positive-pressure self-contained breathin protective fire fighting clothing (includes fire fight boots, and gloves). Avoid contact with this m	ting helmet, coat, trousers,

Equipment for Firefighters:	operations. If contact is likely, wear full chemical resistant clothing with self- contained breathing apparatus and fight fire from a remote location. For protective equipment in post-fire or non-fire clean-up situations, refer to the relevant sections.
Unusual Fire and Explosion Hazards:	Product reacts with water. Reaction may produce heat and/or gases. This reaction may be violent. Violent steam generation or eruption may occur upon application of direct water stream to hot liquids.
Hazardous Combustion Products:	Not applicable.

SECTION 6 – ACCIDENTAL RELEASE MEASURES		
Steps to be taken if material is released or spilled:	Contain spilled material if possible. Small spills: Dilute with water and neutralize with dilute acid; absorb and collect. Large spills: Dike the area to contain the spill. Collect in suitable and properly labeled containers. Attempt to neutralize by adding material such as Acetic acid. See Section 13, Disposal Considerations, for additional information.	
Personnel Precautions:	Evacuate area. Only trained and properly protected personnel must be involved in clean-up operations. Refer to Section 7, Handling, for additional precautionary measures. Keep upwind of spill. Ventilate area of leak or spill. See Section 10 for more specific information. Use appropriate safety equipment. For additional information, refer to Section 8, Exposure Controls and Personal Protection.	
Environmental Precautions:	Prevent from entering into soil, ditches, sewers, waterways and/or groundwater. See Section 12, Ecological Information.	

SODIUM

Issue Date: 01/10/2011

Reviewed Date: 1/25/2023

Page 7 of 16

SECTION 7 – HANDLING AND STORAGE Handling: Do not get in eyes. Do not get on skin or clothing. Do not swallow. Avoid breathing mist. Keep container closed. Use with adequate ventilation. 1. ALWAYS add caustic soda solution to water with constant agitation. NEVER add water to the caustic soda solution. The water should be lukewarm (27°-38°C or 80°-100°F). NEVER start with hot or cold water. The addition of the caustic soda to liquid will cause a rise in temperature. If caustic soda becomes concentrated in one area, is added too rapidly, or is added to hot or cold liquid, a rapid temperature increase can result in DANGEROUS mists, boiling or spattering which may cause an immediate VIOLENT ERUPTION. See Section 8, Exposure Controls and Personal Protection. Keep container closed. Do not store in: Zinc, Aluminum, Brass, or Tin. See Storage: Section 10 for more specific information. Storage >16°C

temperature:

Shelf life: Use within 24 months

SECTION 8 - EXPOSURE CONTROLS / PERSONAL PROTECTION

Preventive Recommendations listed in this section indicate the type of equipment which will provide protection against over exposure to this product. Measures: Conditions of use, adequacy of engineering or other control measures, and actual exposures will dictate the need for specific protective devices at your workplace.

Engineering Local exhaust ventilation should be applied wherever there is an incidence of point source emissions or dispersion of regulated contaminants in the **Controls:** work area. Ventilation control of the contaminant as close to its point of generation is both the most economical and safest method to minimize personnel exposure to airborne contaminants. The most effective measures are the total enclosure of processes and the mechanization of handling procedures to prevent all personal contact.

SODIUM SHINTECH HYDROXIDE, 50% Issue Date: 01/10/2011

Reviewed Date: 1/25/2023

Page 8 of 16

Personal Protective Equipment:	Maintain eye wash station and safety shower facilities in work area. Detailed requirements for personal protective equipment should be established on a site-specific basis.	
Eye/Face Protection:	Wear full face-shield and chemical safety goggles when there is potential for contact.	
Skin/Body Protection:	Wear appropriate personal protective clothing to prevent skin contact that is chemically resistant to this material. Wear rubber boots and chemical resistant gloves. Remove contaminated clothing immediately, wash skin area with soap and water and launder clothing before reuse or dispose of properly.	
Respiratory Protection:	Up to 10mg/m ³ : Supplied Air Respirator (SAR) operated in a continuous- flow mode, eye protection needed; or full face-piece respirator with high- efficiency particulate filter(s); or powered air-purifying respirator with dust and mist filter(s), eye protection needed; or full face-piece Self-Contained Breathing Apparatus (SCBA); or full face-piece SAR. Emergency or Planned Entry into Unknown Concentrations of IDLH	
	Conditions: Positive pressure, full face-piece SAR; or positive pressure, full face-piece SAR with an auxiliary positive pressure SAR.	
Guidelines for Sodium Hydroxide Solutions, 30- 70%:	RECOMMENDED (resistance to breakthrough longer than 8 hours): Burubber; natural rubber, neoprene rubber, nitrile rubber, polyethyler polyvinyl chloride, Teflon(TM), Viton(TM), Saranex(TM), 4H(TI Barricade(TM), CPF 3(TM), Responder(TM), Trellchem HPS(TM), Tycher 10000(TM).	
1070.	NOT RECOMMENDED for use (resistance to breakthrough less than 1 hour): Polyvinyl alcohol.	
Escape:	Full face-piece respirator with high-efficiency particulate filter(s); or escape- type SCBA.	
Exposure Guidelines:		
PRODUCT:	Sodium hydroxide	
	ACGIH Ceiling Exposure Limit (TLV-C): 2mg/m³ OSHA PEL-TWA & PEL-C: 2mg/m³ NIOSH IDLH: 10mg/m³	

NIOSH REL-C: 2mg/m³

SECTION 9 – PHYSICAL AND CHEMICAL PROPERTIES

Physical State	Liquid above freezing point
Physical State	Liquid above freezing point
Physical Form	Liquid
Color	Colorless
Odor	Odorless
Odor Threshold	No data available
Flash Point – Closed Cup	None
Flammable Limits in Air	Lower: Not applicable
	Upper: Not applicable
Autoignition Temperature	Not applicable
Vapor pressure	1.5 mmHg @ 20°C Literature
Boiling Point (760 mmHg)	145°C (293°F) Literature
Vapor Density (air=1)	Not applicable
Specific Gravity (H20=1)	1.52 Literature
Liquid Density	1.5 g/cm3 @ 20°C Literature
Freezing Point	14°C (57°F) Literature
Melting Point	14°C (57°F) <i>Literature</i>
Solubility in Water (by weight)	Water solution
рН	Strong Basic
Evaporation Rate	No data available
Partition Coefficient n-octanol/water	No data available
Decomposition Temperature	No data available
Molecular Weight	40 g/mol
Volatility	No data available
Kinematic Viscosity	0.35 St @ 25° Calculated

* This data is based on 50% Caustic

SECTION 10 – STABILITY AND REACTIVITY

Stability/Instability:	Stable under recommended storage conditions. See Storage, Section 7.
Conditions to avoid:	Avoid moisture. Product absorbs carbon dioxide from the air. Avoid mixing with water, strong acids, or other incompatible materials. Will react with some metals and create a flammable hydrogen gas.
Incompatible Materials:	Heat is generated when mixed with water. Spattering and boiling can occur. Caustic soda solution reacts readily with various reducing sugars (i.e. fructose, galactose, maltose, dry whey solids) to produce CO. Take precautions including monitoring the tank atmosphere for CO to ensure safety of personnel before vessel entry. Avoid contact with:

Reviewed Date: 1/25/2023

Page 10 of 16

acids, glycols and halogenated organics. Organic nitro compounds. Flammable hydrogen may be generated from contact with metals such as: Zinc, Aluminum, Tin, or Brass.

Hazardous Polymerization: Will not occur.

Thermal Decomposition: Does not decompose.

SECTION 11 – TOXICOLOGICAL INFORMATION

Acute Toxicity: Ingestion: Single dose oral LD50 has not been determined.

Skin Absorption: The dermal LD50 has not been determined.

The severity of injury depends on the concentration and duration of exposure to the substance. This material is toxic to the skin, eyes, and mucous membranes. It may cause destructive effects on tissues that it contacts. Inhalation will cause irritation to the respiratory tract and difficulty breathing. Eye contact will cause irritation and may cause severe burns and possible blindness. Contact with skin will cause irritation and may cause corrosion of the tissue.

Repeated Dose Toxicity: Based on available data, repeated exposures are not anticipated to cause additional significant adverse effects.

Genetic Toxicology: For the major component(s): In vitro genetic toxicity studies were negative.

Carcinogenicity: Not a known carcinogen.

SECTION 12 – ECOLOGICAL INFORMATION

Fate and Transport:

Sodium Hydroxide:

Movement No bioconcentration is expected because of the relatively high water solubility. Potential for mobility in soil is very high (Koc between 0 and 50).

SAFETY DATA SHEET SODIUM SODIUM SODIUM HYDROXIDE, 50% Issue Date: 01/10/2011 Reviewed Date: 1/25/2023 Page 11 of 16

Persistence and Degradability	Biodegradation is not applicable.	
Sodium Chloride: Movement	No bioconcentration is expected because of the relatively high water solubility. Potential for mobility in soil is very high (Koc between 0 and 50).	
Persistence and Degradability	Biodegradation is not applicable.	
Ecotoxicity:		
Sodium Hydroxide:	Material is slightly toxic to aquatic organisms on an acute basis (LC50/EC50 between 10 and 100 mg/L in the most sensitive species tested). May increase pH of aquatic systems to >pH 10 which may be toxic to aquatic organisms.	
Fish Acute & Prolonged Toxicity	LC50, rainbow trout (Oncorhynchus mykiss), 96h: 45.5 mg/L	
Aquatic Invertebrate Acute Toxicity		
Sodium Chloride:	Material is practically non-toxic to aquatic organisms on an acute basis (IC50/EC50>100 mg/L in the most sensitive species tested).	
Fish Acute & Prolonged Toxicity LC50, fathead minnow (Pimephales promelas) mg/L		
Aquatic Invertebrate Acute Toxicity	ECCO, wator nou Dupriniu magnu. 1,07 mig/E	

SECTION 13 – DISPOSAL CONSIDERATIONS

Dispose in accordance with all applicable Federal, State/Provincial and local laws and regulations. Waste characterization and compliance with applicable laws and regulations are the responsibility of the waste generator. Do not dispose of waste with normal garbage, or to sewer systems.

Revisions:

- January 2011 no information changed in this MSDS. This MSDS was reviewed for accuracy.
- April 2014 The MSDS was updated to follow new Global Harmonization Guidelines. The MSDS are now called Safety Data Sheets (SDS).
- January 2016 Corrections to improve nomenclature and technical data.
- February 2020 No information changed in this SDS. This SDS was reviewed for accuracy.
- July 2022 Section 2 was updated to include the GHS Classification Category 1 Corrosive to Metals and Category 4 – Acute toxicity - inhalation. Section 2 - GHS Hazard Statements have been revised to indicate that this material is harmful if inhaled.
- November 2022 Section 2 GHS Classifications and Hazard Statements updated.
- January 2023 Removal of health hazard pictogram based on updated hazard statements.

Emergency : 800-424-9300

Number For Chemical Emergency, Spill, Leak, Fire, Exposure, or Accident, call CHEMTREC - Day or Night

SECTION 2: HAZARDS IDENTIFICATION

Classification of the Substance or Mixture 2.1.

Classification (GHS-US)	
Acute Tox. 4 (Oral)	H302
Acute Tox. 4 (Inhalation:gas)	H332
Skin Corr. 1A	H314
Eye Dam. 1	H318
STOT SE 3	H335
Aquatic Acute 1	H400
Aquatic Chronic 3	H412
Full text of H-phrases: see se	ction 16

2.2. Label Elements **GHS-US** Labeling

Hazard Pictograms (GHS-US)

	GHS05 GHS07 GHS09
Signal Word (GHS-US)	: Danger
Hazard Statements (GHS-US)	: H302+H332 - Harmful if swallowed or if inhaled.
	H314 - Causes severe skin burns and eye damage.
	H318 - Causes serious eye damage.
	H335 - May cause respiratory irritation.
	H400 - Very toxic to aquatic life.
	H412 - Harmful to aquatic life with long lasting effects.
Precautionary Statements	: P260 - Do not breathe mist, spray, vapors, gas.
(GHS-US)	P261 - Avoid breathing vapors, mist, or spray.
· · ·	P264 - Wash hands, forearms, and exposed areas thoroughly after handling.
	P270 - Do not eat, drink or smoke when using this product.
	P271 - Use only outdoors or in a well-ventilated area.
	P273 - Avoid release to the environment.
	P280 - Wear eye protection, protective clothing, protective gloves, face protection.
4 4 0004	

Safety Data Sheet

Classified according to the UN-GHS as adopted in the US Hazard Communication Standard (HCS 2012), the Canada Hazardous Products Regulations (WHMIS 2015) and Mexico NOM-018-STPS-2015.

> P301+P330+P331+P310 - IF SWALLOWED: Rinse mouth. Do NOT induce vomiting. Immediately call a poison center or doctor. P303+P361+P353+P310 - IF ON SKIN (OR HAIR): Take off immediately all

contaminated clothing. Rinse skin with water/shower. Immediately call a poison center or doctor.

P304+P340+P310 - IF INHALED: Remove person to fresh air and keep at rest in a position comfortable for breathing. Immediately call a poison center or doctor. P305+P351+P338+P310 - IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. Immediately call a poison center or doctor.

P363 - Wash contaminated clothing before reuse.

P391 - Collect spillage.

P403+P233 - Store in a well-ventilated place. Keep container tightly closed. P405 - Store locked up.

P501 - Dispose of contents/container in accordance with local, regional, provincial, territorial, national, and international regulations.

23 Other Hazards

Ammonium hydroxide is very volatile and may release ammonia as a gas. Ammonia vapor, in concentrations of 16-25% volume by weight in air, is flammable, toxic by inhalation and corrosive. Take all appropriate precautions.

2.4. Unknown Acute Toxicity (GHS-US)

No data available.

SECTION 4: FIRST AID MEASURES

4.1. **Description of First Aid Measures**

General: Never give anything by mouth to an unconscious person. Seek medical attention immediately. Show label if possible.

Inhalation: When symptoms occur: go into open air and ventilate suspected area. Immediately call a POISON CENTER or doctor/physician.

Skin Contact: Immediately flush skin with plenty of water for at least 60 minutes. Remove/Take off immediately all contaminated clothing. Immediately call a POISON CENTER or doctor/physician. Wash contaminated clothing before reuse.

Eye Contact: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing for at least 60 minutes. Immediately call a POISON CENTER or doctor/physician.

Ingestion: Rinse mouth. Do NOT induce vomiting. Immediately call a POISON CENTER or doctor/physician.

Most Important Symptoms and Effects Both Acute and Delayed 4.2.

General: Harmful if swallowed. Corrosive to eyes, respiratory system and skin. Harmful if inhaled.

Safety Data Sheet

Classified according to the UN-GHS as adopted in the US Hazard Communication Standard (HCS 2012), the Canada Hazardous Products Regulations (WHMIS 2015) and Mexico NOM-018-STPS-2015.

Inhalation: Symptoms may include: Sneezing, coughing, burning sensation of throat with constricting sensation of the larynx and difficulty in breathing. Damage to lungs. Harmful if inhaled.

Skin Contact: Corrosive. Causes burns. Symptoms may include: Redness. Pain. Serious skin burns. Blisters.

Eye Contact: Causes serious eye damage. Symptoms may include: Redness. Pain. Blurred vision. Severe burns. Causes permanent damage to the cornea, iris, or conjunctiva.

Ingestion: Harmful if swallowed. May cause burns or irritation of the linings of the mouth, throat, and gastrointestinal tract.

Chronic Symptoms: None known.

4.3. Indication of Any Immediate Medical Attention and Special Treatment Needed

If exposed or concerned, get medical advice and attention.

SECTION 5: FIRE-FIGHTING MEASURES

5.1. Extinguishing Media

Suitable Extinguishing Media: Water spray, fog.

Unsuitable Extinguishing Media: Do not use a heavy water stream. Use of heavy stream of water may spread fire.

5.2. Special Hazards Arising From the Substance or Mixture

Fire Hazard: Ammonia vapor concentrations in the range of 16-25% by volume in air can be ignited if heated to the autoignition temperature. Oil or other combustible materials increases the fire hazard. Emits toxic fumes under fire conditions. **Explosion Hazard:** Forms explosive compounds with calcium hypochlorite, bleaches, gold, mercury, silver, chlorine and other halogens. Contact with strong oxidizers can result in fires and explosions.

Reactivity: Corrosive to copper, brass, silver, zinc and galvanized steel.

5.3. Advice for Firefighters

Precautionary Measures Fire: Exercise caution when fighting any chemical fire.

Firefighting Instructions: Stop leak if safe to do so. Use water spray or fog for cooling exposed containers. In case of major fire and large quantities: Evacuate area. Fight fire remotely due to the risk of explosion.

Protection During Firefighting: Firefighters must use full bunker gear including NIOSH-approved positive-pressure selfcontained breathing apparatus to protect against potential hazardous combustion and decomposition products.

Hazardous Combustion Products: Nitrogen oxides. Ammonia.

Reference to Other Sections

Refer to section 9 for flammability properties.

SECTION 6: ACCIDENTAL RELEASE MEASURES

6.1. Personal Precautions, Protective Equipment and Emergency Procedures

General Measures: Keep away from open flames, hot surfaces and sources of ignition. No smoking. Avoid all contact with skin, eyes, or clothing. Do NOT breathe vapor, mist, spray.

6.1.1. For Non-Emergency Personnel

Protective Equipment: Use appropriate personal protection equipment (PPE).

Emergency Procedures: Evacuate unnecessary personnel. Eliminate ignition sources.

6.1.2. For Emergency Personnel

Protective Equipment: Equip cleanup crew with proper protection.

Emergency Procedures: Stop leak if safe to do so. Ventilate area.

6.2. Environmental Precautions

Prevent entry to sewers and public waters. Notify authorities if product enters sewers or public waters.

6.3. Methods and Material for Containment and Cleaning Up

For Containment: Stop the flow of material, if this is without risk. Ventilate area. Contain any spills with dikes or absorbents.

Methods for Cleaning Up: Clear up spills immediately and dispose of waste safely. Never neutralize spill with acid. Absorb and/or contain spill with inert material, then place in suitable container. Use only non-sparking tools. After cleaning, flush traces away with water.

6.4. Reference to Other Sections

See heading 8, Exposure Controls and Personal Protection. See Section 13, Disposal Considerations.

Safety Data Sheet

Classified according to the UN-GHS as adopted in the US Hazard Communication Standard (HCS 2012), the Canada Hazardous Products Regulations (WHMIS 2015) and Mexico NOM-018-STPS-2015.

SECTION 7: HANDLING AND STORAGE

7.1. Precautions for Safe Handling

Additional Hazards When Processed: Do NOT enter (storage areas, confined spaces) unless adequately ventilated. Emits ammonia vapors. Flammable gas. Ammonium hydroxide reacts with many heavy metals and their salts forming explosive compounds. It may attack metals forming flammable/explosive gas. The solution in water is a strong base, it reacts violently with acids.

Hygiene Measures: Handle in accordance with good industrial hygiene and safety procedures. Wash hands and other exposed areas with mild soap and water before eating, drinking, or smoking and again when leaving work.

7.2. Conditions for Safe Storage, Including Any Incompatibilities

Technical Measures: Any proposed use of this product in elevated-temperature processes should be thoroughly evaluated to assure that safe operating conditions are established and maintained. Ensure adequate ventilation. Comply with applicable regulations.

Storage Conditions: Store in a dry, cool and well-ventilated place. Detached outside storage is preferable. Keep in fireproof place. Store away from oxidizers, combustible materials, and all ignition sources. Store in corrosive resistant container with a resistant inner liner. Storage containers should have safety relief valves. Store locked up.

Incompatible Materials: Forms explosive compounds with calcium hypochlorite, bleaches, gold, mercury, silver, chlorine and other halogens. Contact with strong oxidizers can result in fires and explosions. Corrosive to copper, brass, silver, zinc and galvanized steel.

Storage Area: Post readily visible warning signs in the storage area listing emergency measures. Water hoses should be readily available to disperse vapors in case of a spill.

7.3. Specific End Use(s)

Fertilizer

SECTION 8: EXPOSURE CONTROLS/PERSONAL PROTECTION

8.1. Control Parameters

For substances listed in section 3 that are not listed here, there are no established Exposure limits from the manufacturer, supplier, importer, or the appropriate advisory agency including: ACGIH (TLV), NIOSH (REL), OSHA (PEL), Canadian provincial governments, or the Mexican government.

8.2. Exposure Controls

Appropriate Engineering Controls: Emergency eye wash fountains and safety showers should be available in the immediate vicinity of any potential exposure. Gas detectors should be used when toxic gases may be released. Use explosion-proof equipment.

Personal Protective Equipment: Gloves. Protective goggles. Insufficient ventilation: wear respiratory protection. Protective clothing. Face shield.

Materials for Protective Clothing: Chemically resistant materials and fabrics.

Hand Protection: Wear chemically resistant protective gloves.

Eye Protection: Chemical safety goggles and face shield.

Skin and Body Protection: Wear suitable protective clothing.

Respiratory Protection: If exposure limits are exceeded or irritation is experienced, approved respiratory protection should be worn.

Other Information: When using, do not eat, drink, or smoke.

SECTION 9: PHYSICAL AND CHEMICAL PROPERTIES

9.1. Information on Basic Physical and Chemical Properties

Physical State	Liquid
Appearance	Colorless
Odor	Pungent
Odor Threshold	1 - 50 ppm
рН	10.6 - 11.6 (0.02-1.7% aqueous ammonia solution)
Evaporation Rate	Not available
Melting Point	- 77 °C (-106 °F) (< 44% NH₃)

Safety Data Sheet

Classified according to the UN-GHS as adopted in the US Hazard Communication Standard (HCS 2012), the Canada Hazardous Products Regulations (WHMIS 2015) and Mexico NOM-018-STPS-2015.

Freezing Point	:	-38 °C (-36 °F)
Boiling Point	:	37.4 °C (99.3°F) (25% NH₃)
Flash Point	:	Not available
Auto-ignition Temperature	:	651 °C (1,204°F) (ammonia vapor)
Decomposition Temperature	:	Not available
Flammability (solid, gas)	:	Not available
Lower Flammable Limit	:	16 % (ammonia vapor)
Upper Flammable Limit	:	25 % (ammonia vapor)
Vapor Pressure	:	49642.2 Pa at 68°F (20°C)
Relative Vapor Density at 20 °C	:	0.6 (for ammonia vapor over aqua ammonia at 0°C and 760 mm Hg)
Relative Density	:	Not available
Specific Gravity	:	0.90 at 60 °F (19% NH ₃)
Solubility	:	Soluble in water.
Partition Coefficient: N-Octanol/Water	:	-1.14 at 25° C
Viscosity	:	Not available
Explosion Data – Sensitivity to Mechanical	:	Not expected to present an explosion hazard due to mechanical
Impact		impact.
Explosion Data – Sensitivity to Static	:	Not expected to present an explosion hazard due to static discharge.
Discharge		

SECTION 10: STABILITY AND REACTIVITY

10.1. Reactivity

Forms explosive compounds with calcium hypochlorite, bleaches, gold, mercury, silver, chlorine and other halogens. Contact with strong oxidizers can result in fires and explosions. Corrosive to copper, brass, silver, zinc and galvanized steel.

10.2. Chemical Stability

Stable under recommended handling and storage conditions (see section 7).

10.3. Possibility of Hazardous Reactions

Hazardous polymerization will not occur.

10.4. Conditions to Avoid

Direct sunlight. Extremely high or low temperatures. Heat. Sources of ignition.

10.5. Incompatible Materials

Strong acids. Strong bases. Strong oxidizers. Hypochlorites.

10.6. Hazardous Decomposition Products

Thermal decomposition generates: Carbon oxides (CO, CO2). Nitrogen oxides. Emits ammonia vapors.

SECTION 11: TOXICOLOGICAL INFORMATION

11.1. Information on Toxicological Effects - Product

Acute Toxicity: Oral: Harmful if swallowed. Inhalation:gas: Harmful if inhaled.

LD50 and LC50 Data:

ATE US (oral)	350.00 mg/kg body weight
ATE US (gases)	10,256.41 ppmV/4h

Skin Corrosion/Irritation: Causes severe skin burns and eye damage.

pH: 10.6 - 11.6 (0.02-1.7% aqueous ammonia solution)

Serious Eye Damage/Irritation: Causes serious eye damage.

pH: 10.6 - 11.6 (0.02-1.7% aqueous ammonia solution)

Respiratory or Skin Sensitization: Not classified

Germ Cell Mutagenicity: Not classified

Teratogenicity: Not available

Carcinogenicity: Not classified

Specific Target Organ Toxicity (Repeated Exposure): Not classified

Reproductive Toxicity: Not classified

Specific Target Organ Toxicity (Single Exposure): May cause respiratory irritation.

Safety Data Sheet

Classified according to the UN-GHS as adopted in the US Hazard Communication Standard (HCS 2012), the Canada Hazardous Products Regulations (WHMIS 2015) and Mexico NOM-018-STPS-2015.

Aspiration Hazard: Not classified

Symptoms/Injuries After Inhalation: Symptoms may include: Sneezing, coughing, burning sensation of throat with constricting sensation of the larynx and difficulty in breathing. Damage to lungs. Harmful if inhaled.

Symptoms/Injuries After Skin Contact: Corrosive. Causes burns. Symptoms may include: Redness. Pain. Serious skin burns. Blisters.

Symptoms/Injuries After Eye Contact: Causes serious eye damage. Symptoms may include: Redness. Pain. Blurred vision. Severe burns. Causes permanent damage to the cornea, iris, or conjunctiva.

Symptoms/Injuries After Ingestion: Harmful if swallowed. May cause burns or irritation of the linings of the mouth, throat, and gastrointestinal tract.

Chronic Symptoms: None known.

11.2. Information on Toxicological Effects - Ingredient(s)

LD50 and LC50 Data:

Ammonia (7664-41-7)		
LC50 Inhalation Rat	5.1 mg/l (Exposure time: 1 h)	
LC50 Inhalation Rat	2000 ppm/4h (Exposure time: 4 h)	
Water (7732-18-5)		
LD50 Oral Rat	> 90000 mg/kg	
Ammonium hydroxide (1336-21-6)		
LD50 Oral Rat	350 mg/kg	
SECTION 12: ECOLOGICAL INFORMATION		

12.1. Toxicity

Ecology - General: Toxic to aquatic life. Harmful to aquatic life with long lasting effects.

Ammonia (7664-41-7)	
LC50 Fish 1	0.44 mg/l (Exposure time: 96 h - Species: Cyprinus carpio)
EC50 Daphnia 1	25.4 mg/l (Exposure time: 48 h - Species: Daphnia magna)
LC 50 Fish 2	0.26 - 4.6 mg/l (Exposure time: 96 h - Species: Lepomis macrochirus)
Ammonium hydroxide (1	336-21-6)
LC50 Fish 1	8.2 mg/l (Exposure time: 96 h - Species: Pimephales promelas)
EC50 Daphnia 1	0.66 mg/l (Exposure time: 48 h - Species: water flea)
EC50 Daphnia 2	0.66 mg/l (Exposure time: 48 h - Species: Daphnia pulex)

12.2. Persistence and Degradability

Ammonium hydroxide (1336-21-6)

Persistence and Degradability Biodegradation of ammonia occurs in water under aerobic conditions.

12.3. Bioaccumulative Potential

Log Pow -1.14 Bioaccumulative Potential Not established. Ammonia (7664-41-7) -1.14 (at 25 °C)	Ammonium hydroxide (1336-21-6)	
Ammonia (7664-41-7)	Log Pow	-1.14
	Bioaccumulative Potential	Not established.
Log Pow -1 14 (at 25 °C)	Ammonia (7664-41-7)	
	Log Pow	-1.14 (at 25 °C)

12.4. Mobility in Soil

Not available

12.5. Other Adverse Effects

Other Information: Avoid release to the environment.

SECTION 13: DISPOSAL CONSIDERATIONS

13.1. Waste treatment methods

Sewage Disposal Recommendations: Do not empty into drains; dispose of this material and its container in a safe way. **Waste Disposal Recommendations:** Dispose of waste material in accordance with all local, regional, national, provincial, territorial and international regulations.

Additional Information: Prevent runoff from entering drains, sewers or waterways.

Ecology – Waste Materials: This material is hazardous to the aquatic environment. Keep out of sewers and waterways.

Safety Data Sheet Classified according to the UN-GHS as adopted in the US Hazard Communication Standard (HCS 2012), the Canada Hazardous Products Regulations (WHMIS 2015) and Mexico NOM-018-STPS-2015.

(WHMIS 2015) and Mexico NOM-01	8-STPS-2015.

² Indicate by "C" if venting is continuous. Otherwise, specify the average short-term venting rate with units, for intermittent venting (ie., 15 min/hr). Indicate as many rates as needed to clarify frequency of venting (e.g., 5 min/day, 2 days/wk).

³ List all regulated air pollutants. Speciate VOCs, including all HAPs. Follow chemical name with Chemical Abstracts Service (CAS) number. **LIST** Acids, CO, CS₂, VOCs, H₂S, Inorganics, Lead, Organics, O₃, NO, NO₂, SO₂, SO₃, all applicable Greenhouse Gases (including CO₂ and methane), etc. **DO NOT LIST** H₂O, N₂O, N₂O, O₂, and Noble Gases.

⁴ Give maximum potential emission rate with no control equipment operating. If emissions occur for less than 1 hr, then record emissions per batch in minutes (e.g. 5 lb VOC/20 minute batch).

⁵ Give maximum potential emission rate with proposed control equipment operating. If emissions occur for less than 1 hr, then record emissions per batch in minutes (e.g. 5 lb VOC/20 minute batch).

⁶ Indicate method used to determine emission rate as follows: MB = material balance; ST = stack test (give date of test); EE = engineering estimate; O = other (specify).

⁷ Provide for all pollutant emissions. Typically, the units of parts per million by volume (ppmv) are used. If the emission is a mineral acid (sulfuric, nitric, hydrochloric or phosphoric) use units of milligram per dry cubic meter (mg/m³) at standard conditions (68 °F and 29.92 inches Hg) (see 45CSR7). If the pollutant is SO₂, use units of ppmv (See 45CSR10).

The EMISSION POINTS DATA SUMMARY SHEET provides a summation of emissions by emission unit. Note that uncaptured process emission unit emissions are not typically considered to be fugitive and must be accounted for on the appropriate EMISSIONS UNIT DATA SHEET and on the EMISSION POINTS DATA SUMMARY SHEET. Please note that total emissions from the source are equal to all vented emissions, all fugitive emissions, plus all other emissions (e.g. uncaptured emissions). Please complete the FUGITIVE EMISSIONS DATA SUMMARY SHEET for fugitive emission activities.

¹ Please add descriptors such as upward vertical stack, downward vertical stack, horizontal stack, relief vent, rain cap, etc.

² Indicate by "C" if venting is continuous. Otherwise, specify the average short-term venting rate with units, for intermittent venting (ie., 15 min/hr). Indicate as many rates as needed to clarify frequency of venting (e.g., 5 min/day, 2 days/wk).

³ List all regulated air pollutants. Speciate VOCs, including all HAPs. Follow chemical name with Chemical Abstracts Service (CAS) number. **LIST** Acids, CO, CS₂, VOCs, H₂S, Inorganics, Lead, Organics, O₃, NO, NO₂, SO₂, SO₃, all applicable Greenhouse Gases (including CO₂ and methane), etc. **DO NOT LIST** H₂, H₂O, N₂, O₂, and Noble Gases.

⁴ Give maximum potential emission rate with no control equipment operating. If emissions occur for less than 1 hr, then record emissions per batch in minutes (e.g. 5 lb VOC/20 minute batch).

⁵ Give maximum potential emission rate with proposed control equipment operating. If emissions occur for less than 1 hr, then record emissions per batch in minutes (e.g. 5 lb VOC/20 minute batch).

⁶ Indicate method used to determine emission rate as follows: MB = material balance; ST = stack test (give date of test); EE = engineering estimate; O = other (specify).

⁷ Provide for all pollutant emissions. Typically, the units of parts per million by volume (ppmv) are used. If the emission is a mineral acid (sulfuric, nitric, hydrochloric or phosphoric) use units of milligram per dry cubic meter (mg/m³) at standard conditions (68 °F and 29.92 inches Hg) (see 45CSR7). If the pollutant is SO₂, use units of ppmv (See 45CSR10).

ATTACHMENT K

FUGITIVE EMISSIONS DATA SUMMARY SHEET

FUGITIVE EMISSIONS DATA SUMMARY SHEET

The FUGITIVE EMISSIONS SUMMARY SHEET provides a summation of fugitive emissions. Fugitive emissions are those emissions, which could not reasonably pass through a stack, chimney, vent or other functionally equivalent opening. Note that uncaptured process emissions are not typically considered to be fugitive, and must be accounted for on the appropriate EMISSIONS UNIT DATA SHEET and on the EMISSION POINTS DATA SUMMARY SHEET.

Please note that total emissions from the source are equal to all vented emissions, all fugitive emissions, plus all other emissions (e.g. uncaptured emissions).

	APPLICATION FORMS CHECKLIST - FUGITIVE EMISSIONS
1.)	Will there be haul road activities?
	🛛 Yes 🗌 No
	If YES, then complete the HAUL ROAD EMISSIONS UNIT DATA SHEET.
2.)	Will there be Storage Piles?
	□ Yes
	☐ If YES, complete Table 1 of the NONMETALLIC MINERALS PROCESSING EMISSIONS UNIT DATA SHEET.
3.)	Will there be Liquid Loading/Unloading Operations?
	□ Yes □ No
	If YES, complete the BULK LIQUID TRANSFER OPERATIONS EMISSIONS UNIT DATA SHEET.
4.)	Will there be emissions of air pollutants from Wastewater Treatment Evaporation?
	□ Yes □ No
	If YES, complete the GENERAL EMISSIONS UNIT DATA SHEET.
5.)	Will there be Equipment Leaks (e.g. leaks from pumps, compressors, in-line process valves, pressure relief devices, open-ended valves, sampling connections, flanges, agitators, cooling towers, etc.)?
	Yes INO Leak Source Count is in Attachment N.
	☑ If YES, complete the LEAK SOURCE DATA SHEET section of the CHEMICAL PROCESSES EMISSIONS UNIT DATA SHEET.
6.)	Will there be General Clean-up VOC Operations?
	□ Yes
	If YES, complete the GENERAL EMISSIONS UNIT DATA SHEET.
7.)	Will there be any other activities that generate fugitive emissions?
	□ Yes
	If YES, complete the GENERAL EMISSIONS UNIT DATA SHEET or the most appropriate form.
	ou answered "NO" to all of the items above, it is not necessary to complete the following table, "Fugitive Emissions nmary."

FUGITIVE EMISSIONS SUMMARY	All Regulated Pollutants ⁻ Chemical Name/CAS ¹		ntial Uncontrolled sions ²	Maximum Poter Emissi	Est. Method

Engine Model and Manufacturer

Performance Data

The **Sector** offers very high, singlecycle efficiency. In the selected configuration and rating, one engine will produce a maximum 21,000 kW (or 28,194 HP) mechanical power at the shaft. The engines are Dual-Fuel capable, for maximum flexibility. The advantage of these engines among high efficiency and reliability is that they can be upgraded to ammonia engines, increasing the power output to 26,000 kW each, and minimizing the CO₂ per kWh to 66 g, once the fuel is available.

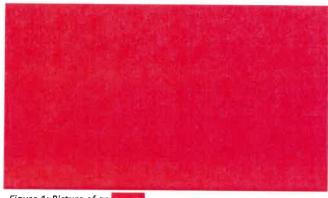

Figure 1: Picture of an

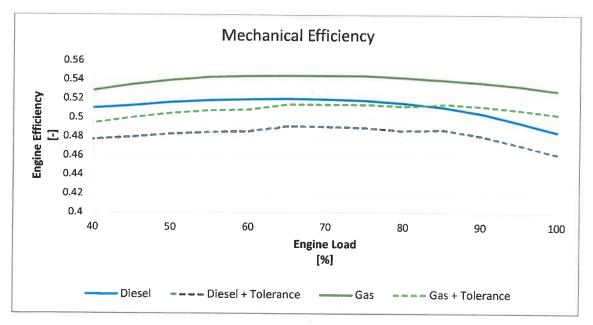

Figure 2: Efficiency of the engine as a function of the load

Power

On the permitting site there will be a total of 117 engines. With the maximum power output of 21 MW per engine, the installed theoretical power output is 2,457 MW. The effective and continuously delivered power output will be 1,795 MW, for 8,760 hours per year.

Fuel Types

In their Dual-Fuel configuration, the engines operate on natural gas and on diesel fuels or can be operated on diesel fuel only, in backup mode. Under normal operation the engines consume gas as their primary fuel with a pilot injection of Ultra-Low Sulfur Diesel. For this application the gas has the following properties (lower heat rate 976.94 BTU/ft³):

Date	BTU	SG	C02	N2	Methane	Ethane	Propane	I-Butane	N-Butane	I-Pentane	N-Pentane	c6+
Average	1082.2	0.61	0.20	0.44	90.33	8.44	0.52	0.02	0.03	0.01	0.00	0.01
STD in % of average	0.66	0.78	11.09	5.04	0.85	8.17	57.48	20.82	24.96	33.90	55.06	63.08

Under gas operation, 2% of the energy comes from the pilot fuel, which can be increased to 100% for emergency operation. The fuel used in this application will be Ultra-Low Sulfur Diesel (ULSD), with a sulfur Content: \leq 15 parts per million (ppm) and a heat rate of 130,613 BTU/gal.

Operational profiles

Normal Operation

To ensure peak operation conditions, the engines will be regularly serviced. With 1-2 weeks of downtime per engine per year, 3 engines are going to be off-line at any time of the year. Under normal operations, the engines will be run at 75% power only. Therefore, the continuously delivered power will be 1,796 MW.

Compensation Mode

In case of one or – in the unrealistic, but foreseen case of - up to 29 engines out of service, the rest of the field will compensate, increasing their power output to 100%. For the calculation of the yearly emissions the worst case is assumed, when 29 engines go offline and the remaining 85 are operated at 100%.

Emergency Mode

In case the pipeline is down, or the gas cannot be delivered for any other reason, the engines can switch to *diesel fuel mode* immediately and are then operated on diesel fuel only. Apart from the different fuel type, the engines are controlled in the same way as in *Normal Operation*.

Startup Mode

To start an engine and bring power production online, several steps are necessary. In the first phase the emission control system is not operational temperature, therefore the control rate is not optimal. The following is a simplification and a representation of the worst case for emissions emission-wise. The different steps can be reduced to four main sub-modes:

- Speed up
- Fuel Switch
- Generator switched on
- Load up cold control

Speed up

Bring the engine from stand still to nominal speed (89 rpm). This is done in diesel mode. The emission control system is still offline at this point, as it is not at optimal temperature. Once nominal speed is set and the minimum load for a fuel switch is reached (less than 5 minutes), the system initiates the next sub mode: Fuel Changeover

Fuel Changeover

For about two minutes the load is kept constant, and the fuel is changed from 100% diesel to 98% gas & 2% diesel.

Generator switched on

On gas operation, the load is further increased until the generator can by energized and synchronized with the rest of the engine fleet. This takes no more than 5 minutes. For the emissions calculation of all these steps the emission control system is looked at as non-operational, even though the exhaust gases will have heated it already and some abatement is taking place, even at a reduced level.

Load up cold control

Once the generator is online and synchronized, then the engine is powered up to its set point (75% in normal operation mode). For reasons of simplicity and to ensure a conservative view on the problem, during engine load up the control system is looked at as cold and operational at 25% only. This even though in reality the system was heated up constantly by the exhaust gases and reaching operational condition during the load up.

Shut Down

The shut down procedure consists of three phases:

- Ramp down
- Min Load
- Spin out

Ramp down

The load is constantly reduced to a minimum load.

Min Load

At minimum load the generator is decoupled from the grid and the engine's load and speed setting are zero.

Spin out

Due to the zero-load setting the injection systems are turned off and the engine is spun out until full stop. In this entire sequence the emission control system is still operational due to its thermal inertia. Therefore, until the injection is stopped the emissions are treated.

All these steps are represented in Figure 3.

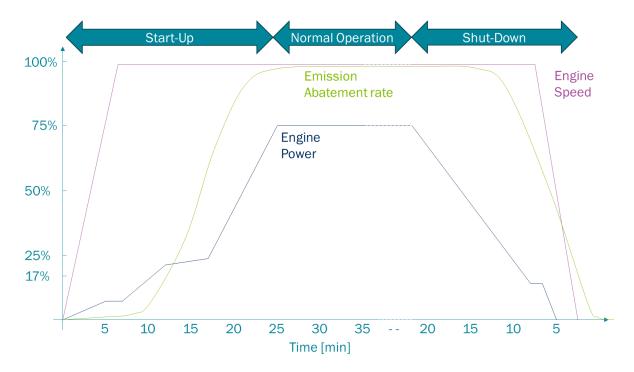

Figure 3: Simplified representation of the Start-Up and Shut-Down phases. Purple: Speed, dark blue: Power and green the efficiency of the emission control system

Emission Levels

For this application the engines are operated in two fuel modes, *Gas mode*, and Diesel mode, where 100% of the energy come from diesel. In Gas mode, where 98% of the energy comes from Natural Gas and 2% from diesel fuel injection (Ultra Low Sulfur Diesel), the engine's raw emissions going into the emission control system are listed in Table 1.

Gas mode			75	50	25	20	10
NOx	g/kWh	1.0	0.4	0.4	0.8	0.9	1.0

Table 2: Engine raw emissions in Diesel mode

Emission Control System

A detailed description of the system can be found in document 21801.24.0.TGT-PL TGT Process description.pdf

On a high level the emission abatement, or control system, consists of two main systems, the dry system on the high pressure side of the engine (before the turbocharger) and the wet system on the low pressure side, downstream the turbocharger.

The dry system consists of an oxydation catalyst and and an SCR catalyst. The catalytic reduction of **CO** has an **efficiency** of over **99%**. The same system oxidises **VOC** emission with a conversion **efficiency** of **99%** The de-NOx unit is a classic, urea-based **SCR**-technology, the **efficiency** is expected to be higher than **90%**. Doing so the dry system **consumes 13.2 l/h of NH**₃ (aq).

The wet system consists of 4 stages, which take further care of the **NOx with 90.9%** efficiency and the **SOx with 70% efficiency**. The four stages consume the following chemicals:

Chemical	%w	lb/gal	[gal/h]	[lb/h]
NH₃ (aq.)	19%	7.51	3.49	26.2
NaOH	50%	12.52	29.91	374.5
NaHS (reducing agent)	45%	10.85	0.11	1.1
NaClO2 (oxidizing agent)	25%	10.01	0.40	4.0
H ₂ SO ₄	36%	10.68	0.10	1.1

Table 3: Use of chemicals for the emission control system

Normal Operation

Under normal circumstances the engines operate on gas at 75% load, at their peak efficiency, hence with lowest specific fuel consumption. They are stopped once a year for servicing, while another engine takes up this load. In *Normal Operation* mode one single engine consumes 4,574.1 lb/h of gas (98,924 ft³/h) and 27.8 lb/h (3.91 gal/h) of ULSD.

REDACTED Information Claimed Confidential by TransGas Development Systems, LLC March 24, 2025 Doing so, it produces the following raw emissions:

NOx	PM	СО	VOC	SO2	CO2	Methane	N2O	CO2_eq
[lb/h]	[lb/h]	[lb/h]						
13.89	0.45	22.36	22.63	0.74	12,634	47.60	0.25	14,035

Table 4: Emissions of a single engine in Normal Operation

* with Global Warming Potential of 28 for Methane and 265 for laughing gas

While one individual engine never sees a total run time of 8760 hours per year, there are 114 engines that do experience this as a collective. One single engine of the operated collective therefore consumes 20,035 short tons of gas per year (866,574,112 ft³/a) and 122 tons (34,273 gal/a) of ULSD per year and produces the following raw emissions:

NOx	PM	СО	VOC	SOx	CO2	Methane	N2O	CO2_eq
[t/a]	[t/a]	[t/a]	[t/a]	[t/a]	[t/a]	[t/a]	[t/a]	[t/a]
60.83	1.99	97.92	99.12	3.25	55,339	208	1.1	61,472

Table 5: Emissions of 1 engine under Normal Operation (8760 hours)

Table 9: Emissions during a startup and shutdown sequence for one single engine.

Normal Operation Scenario

Therefore, under normal circumstances the 117 engines emit the following over one year, including one startup and shutdown sequence, each:

NOx	PM	СО	VOC	SOx	CO2	Methane	N2O	CO2_eq
[t/a]	[t/a]	[t/a]	[t/a]	[t/a]	[t/a]	[t/a]	[t/a]	[t/a]
69.9	169.9	167.6	113.3	3.7	6,308,872	23,768	127.1	7,008,055

Table 10: Entire yearly emissions for the entire plant und normal circumstances.

To do so, the entire plant consumes 2,284,014.5 tons of natural gas (98,792,705,589 ft³) coming in a pipeline and 13,876 tons of diesel (3,908,687 gal) which will be shipped on site.

Emergency Mode

In case when no gas is available, the engines can be operated in so called emergency mode and the power comes from diesel. In this mode a single engine consumes 5666.8 lb/h (798 gal/h) and emits the following:

Ν	NOx	PM	СО	VOC	SO2	CO2	Methane	N2O	CO2_eq
[lb/h]	[lb/h]	[lb/h]	[lb/h]	[lb/h]	[lb/h]	[lb/h]	[lb/h]	[lb/h]
1	L0.35	1.29	0.58	0.29	0.11	17,896	0.00	0.67	18,073

Table 11: Controlled hourly emissions per engine in Emergency Mode

Compensation Mode

In case some engines should for any reason fail, the remaining engines will compensate for the loss of power, by increasing their power output. Here the worst case, of each engine ramping up to 100% load, is looked at. Under such conditions the engines consume 6,386 lb of natural gas per hour (138,112 ft³) and 27.8 lb/h of ULSD (3.91 gal/h). The following emissions result from this kind of operation:

NOx	PM	СО	VOC	SO2	CO2	Methane	N2O	CO2_eq
[lb/h]	[lb/h]	[lb/h]						
0.46	0.20	1.41	0.27	0.01	17,605	57.73	0.59	19,378

Table 12: Controlled hourly emissions per engine in Compensation Mode

Worst case scenario

As shown earlier, under Normal Operation conditions the engines stay well below the 250 t/year limit for all the regulated emissions. But to ensure that the power plant can be operated under worst case conditions, the following, unrealistic but not impossible scenario was looked at:

The pipeline is out for 8 days (192 hours); hence the power plant is operated on diesel. In the same year an unforeseeable event takes down 31 engines (26% of the entire plant) and the remaining 86 engines will compensate for by delivering the full power, increasing their output to 99.4% load. This situation lasts 24 days (567 hours). Additionally, the engines have to be started up and shut down 5 times, instead of once per year.

The engines are therefore for the following number of hours operated in the corresponding mode:

Speed up	0.42
Fuel Switch	0.17
Generator switched on	0.42
Load up cold control	0.83
Normal Operation	7996.80
Compensation Mode	567.20
Ramp down	1.67
Min load	0.42
Spin out	0.08
Emergency Mode	192.00
Total operational time	8760

Table 13: Operational time in hours for each engine mode under worst case scenario

Under this scenario and the consequent operational profiles, the entire plant will emit the following emissions per year:

	Gas	Diesel	NOx	PM	CO	VOC	SO2	CO2_e
	[t/a]	[t/a]	[t/a]	[t/a]	[t/a]	[t/a]	[t/a]	[t/a]
Speed up	0.00	24.19	2.13	0.01	0.06	0.46	0.00	77
Fuel Switch	6.56	0.10	0.05	0.01	0.08	0.12	0.00	25
Generator switched on	32.02	0.40	0.19	0.01	0.22	0.30	0.00	102
Load up cold control	79.11	0.88	0.33	0.02	0.34	0.43	0.00	244
Normal Operation	213,6163	12,661	63.31	155.11	152.86	103.15	3.38	6397261
Compensation Mode	208,133	898	14.97	17.22	45.53	8.84	0.33	626484

Min load	32.02	0.40	0.06	0.01	0.11	0.09	0.00	102
Spin out	3.28	0.05	0.01	0.00	0.03	0.04	0.00	12
Emergency Mode	0.00	61,751	113.24	14.11	6.31	3.15	6.22	197796
Total	2,291,799	75,605	194	187	206	117	10	7,222,837

Table 14: Total yearly emissions of the entire power plant under worst case scenario

Hazardous emissions

The hazardous emissions are calculated based on the distribution described in

EPA AP-42, Table 3.2-1, 3.2-3 and 3.2-4.

The emissions are calculated as a percentage of the VOC (NMHC) emissions.

NMHC	Benzene	Toluene	Xylenes	Formaldehyde	Acrolein	Acetaldehyde	Naphthalene
0.2	0.000776	0.000281	0.000193	0.0000789	0.00000788	0.0000225	0.00013
100%	0.388%	0.141%	0.097%	0.039%	0.004%	0.011%	0.065%

Table 15: Hazardous emission according to EPA AP-42 in lb/MMBtu and as a percentage of the Non-Methane Hydrocarbons

With a reduction factor of 99% the Benzene emissions on an hourly basis per engine, and on a yearly basis for the entire plant are the following:

Mode	Time	NMHC	Ur	ncontrolled	Abatement	C	Controlled

Resulting in Acetaldehyde emissions below 150 pounds per year.

Liquid and fuel handling

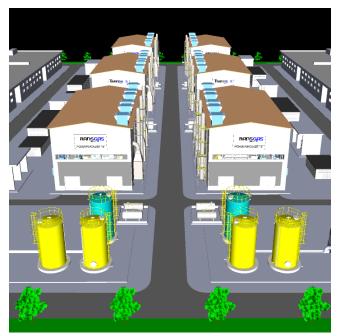

Figure 4: Liquid Storage in front of a set of power houses: Yellow: Diesel tanks, Greenish: Water tanks White: Oil and component tanks

On-site Water Storage

For fire protection and supplementary cooling, the facility maintains an on-site water storage capacity of 2,641,721 gallons, distributed over the entire plant in 14 tanks with 26 feet in diameter and 44 feet in height.

Ultra Low Sulfur Diesel

The engines consume 13,876 tons of ULSD per year (10,704 gal/day) which will be transported on site. To ensure fire safety and to protect the valuable hardware within the data center, the volume of flammable liquids stored on-site will be minimized. For emergency preparedness, a three-day supply of 25,000 tons will be maintained in multiple smaller storage tanks. The rest will be in strategic locations nearby.

The diesel will be stored in 40 tanks distributed across the entire plant, 26 feet in diameter and 44 feet in height.

Lubrication Oil

The engines consume about 2,025 tons of lubrication oil per year (1563 gal/day), which will be shipped on site. Additionally, about 20 tons will be stored on site, in tanks of 160 gallon in each power house.

Natural Gas

The gaseous fuel will be transported by pipeline.

Emission Control Components

For the emission abatement system liquids are transported to the site. A 3-day storage will be kept on site.

Component	Consumption Stora			
-	[t/a]	[gal/h]	[t]	
NH₃ (aq)	13'078	3.49	108	
NaOH	186'984	29.91	1537	
NaHS (reducing agent)	572	0.11	5	
NaClO2 (oxidizing agent)	1'995	0.40	17	
H₂SO₄	535	0.10	5	

Table 23: List of chemicals yearly used, and amount stored on site

The Storage will be in the corresponding standard tanks for these liquids, horizontally arranged tanks of 16 feet length and 7 feet diameter.

Chemicals in Use

- Hydrous Ammonia
- Caustic Soda NaOH
- Sulfuric Acid H2SO4
- NaClO2 (oxidizing agent)
- NaHS (reducing agent)

ANNEX

The 117 engines will be arranged according to the plan on Figure 5. It shows the map of the site, with 7 pods. Every pod holds two large buildings on the outer side, housing the data centers and 6 power houses in the middle (magenta/pink). A powerhouse holds three engine-generator setups (genset), auxiliaries and parts of the emission control systems. This gives theoretically space for $7 \times 6 \times 3 = 126$ gensets. The remaining three buildings will be used for logistical and storage purposes though (spare parts, fluid preparation etc.)

Figure 5: Site plan showing the 7 pods

Attachment L EMISSIONS UNIT DATA SHEET STORAGE TANKS

Provide the following information for <u>each</u> new or modified bulk liquid storage tank as shown on the *Equipment List Form* and other parts of this application. A tank is considered modified if the material to be stored in the tank is different from the existing stored liquid.

IF USING US EPA'S TANKS EMISSION ESTIMATION PROGRAM (AVAILABLE AT <u>www.epa.gov/tnn/tanks.html</u>), APPLICANT MAY ATTACH THE SUMMARY SHEETS IN LIEU OF COMPLETING SECTIONS III, IV, & V OF THIS FORM. HOWEVER, SECTIONS I, II, AND VI OF THIS FORM MUST BE COMPLETED. US EPA'S AP-42, SECTION 7.1, "ORGANIC LIQUID STORAGE TANKS," MAY ALSO BE USED TO ESTIMATE VOC AND HAP EMISSIONS (<u>http://www.epa.gov/tnn/chief/</u>).

I. GENERAL INFORMATION (required)

1. Bulk Storage Area Name	Bulk Storage Area Name 2. Tank Name

PROCESS DESCRIPTION for

POLLUTION CONTROL for NATURAL GAS ENGINE EMISSIONS

Abatement system Package

Prepared for

Transgas – Adams Fork project February 10, 2025 Rev. 03

1. Introduction

Below is a description of the basic concept on which the proposed system is based, together with some preliminary evaluations about the foreseen chemicals consumption.

The overall process scheme is presented in the **attachment 1 – OVERALL PROCESS SCHEME** and detailed below.

The configuration and equipment sizing has been studied for the maximum flow rate – corresponding to 100% load of the engine with iCER, 21.000 kW of mechanical power at shaft when engine runs in compensation mode, and the maximum load of pollutants.

The system described below will be installed individually for each engine.

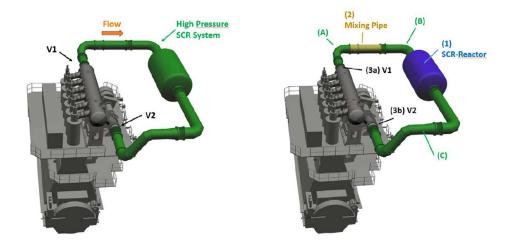

Attachment 2 rev 02– EMISSION ABATEMENT STEPS shows the pollutant flow at each stage (A to D), as indicated in the overall process scheme, with the target of reaching the maximum total emission level of:

- NOx < 250 tpy (short)
- CO < 250 tpy (short)
- SOx < 250 tpy (short)
- PM < 250 tpy (short)

for a total of 114 engines operating at the same time and continuously at maximum load.

2. Description of the dry deCO + deNOx system

Dry flue gas treatment system is installed before the turbocharger, so at high pressure. An example of such an installation is shown in the picture below (please note that the picture shows the deNOx reactor only and not the deCO).

The first stage of the dry deCO and deNOx system is the catalytic removal of CO in a dedicated deCO reactor.

Data	unit	NORMAL
Data	unic	-
		OPERATION
Flow rate	kg/s	34.4
	kg/h	123,840
Gas density	kg/mc	1.27
Vol. flow rate	Am³/h	241.878
Normalized flow	Nm³/h	97,512
Static Pressure IN	barg	4,12
Temperature	°C	360
NOx Load	kg/hr	6.3
NOx Ratio	NO:NO ₂	90:10
CO load	kg/hr	19.82
VOCs load	Kg/hr	39,5
H ₂ O	Vol%	7.8%
N ₂	Vol%	77.1%
O ₂	Vol%	4%
CO2	Vol%	6.8%
SO ₂	Kg/h	0,74

Here the data at deCO reactor inlet when engine is in Normal Operation are summarized:

Flue gas is distributed to a layer of oxidation catalyst where CO is removed according to the following reaction:

(1) $2CO + O_2 \rightarrow 2CO_2$

CO catalytic removal can reach efficiency close to 100%. In this case, the catalyst will be selected to reach up to 98% efficiency when running in Normal Operation mode with natural gas and iCER system.

DeCO reactor has also the function to oxidize VOCs to CO_2 and H_2O ; in particular, formaldehyde, by far the most important VOC, will be removed with efficiency >99%.

After deCO reactor, flue gas flows to another reactor equipped with deNOx catalyst. In the space between deCO reactor and deNOx reactor, urea $(CO(NH_2)_2)$ or ammonia solution is injected. The system for reagent injection is mainly composed by:

- *Flow Control Unit (FCU)* Complete Control skid to feed the injection lances with pneumatic control valve, MID flow meter, Manometers and valves complete mounted on a skid
- *Evaporator System* (if urea is used as reagent) with Ambient Air Blower, Pneumatic On-Off-Damper, Flowmeter, Pressure and Temperature Transmitter, Air Preheater and Spray Evaporator with Injection Lance. This is needed because for removing NO_x, urea must be heated to be converted to NH₃, CO₂ and H₂O.
- *Reagent / Compressed Air Direct Injection Lances* (if ammonia solution is used as reagent) for installation into flue gas duct. Compressed air is used for generating very fine reagent droplet by means of specially design nozzles (see pictures of lance and nozzle below)

Table 1 – Exhaust features at Genset outlet (before turbine)–

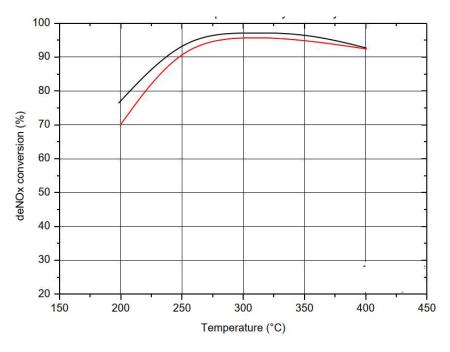

- Detailed 3D CFD-Optimization is needed for Complete flue gas ductwork design from deCO reactor exit till catalyst outlet including Reagent Direct Injection, Static Mixing System, and guide vanes (if required). Results of velocity, pressures NOx-NH₃ distribution values on top of first catalyst layer till all guarantees are met.
- Static Mixer System based on final CFD optimization to mix NH₃ and NO_x.

After reagent injection and mixing, in presence of catalyst based on vanadium pentoxide (V_2O_5) NOx are removed by NH₃ according to the following reactions (with several secondary and intermediate reactions), that occur at temperatures between 180°C and 500°C

- (2) $2NO + 2NH_3 + \frac{1}{2}O_2 \rightarrow 2N_2 + 3H_2O$
- (3) $NO_2 + 2NH_3 + \frac{1}{2}O_2 \rightarrow \frac{3}{2}N_2 + 3H_2O$
- (4) NO + NO₂ + 2NH₃ + $\frac{1}{2}$ O₂ \rightarrow 2 N₂ + 3H₂O

Catalytic nitrogen oxides removal can achieve very high efficiency as shown in the graph below:

 NO_x removal at Adam Forks occurs in the best temperature range, where efficiency higher that 90% is possible; anyway, it is assumed that maximum 90% removal is reached in deNO_x catalytic

reactor. A quantity of 13.2 lt/h of ammonia, in its typical aqueous solution at 19%, is needed to achieve the reaction when engine is running in Normal Operation.

After the deNOx, the gas is sent to the turbocharger and then it is split into two streams. One part, after being cooled, goes back to the engine, mixing with combustion air (flue gas recirculation); the remaining part, with a flow of 17.6 kg/s, represents the exhaust that is first quenched to 58°C, and then enters into the We-NOx system for SOx and NOx wet abatement.

3. Description of the wet system

The We-NOx system is a multistage plant:

- The first stage is designed for the removal of SOx and any other acids carried over by exhaust gases.
- The second and third stages are for the removal of NOx. These stages are based on an ORP process, an oxidation-reduction mechanism that converts NOx into gaseous nitrogen (N_2) , achieving a "zero instrumental" concentration at the stack if required.
- The fourth stage serves as the finishing and control unit to complete the process.

For better understanding, we would like to refer to the case at hand and describe step by step the entire process of NOx removal from the exhaust:

3.1 AVAILABLE DATA (inlet data to the De-SOx/We-NOx, downstream the dry treatment):

Data	unit	Normal Operation –
		75% gas
Flow rate	kg/s	17,6
	kg/h	63.360
Gas density	kg/Nmc	1,27
Vol. flow rate	ACMH	95.798
Normalized flow	Nmc/h	49.890
Static Pressure IN	mm.w.g	700
Temperature	°C	215
NOx Load	kg/hr	0,322
NOx Ratio	NO:NO ₂	90:10
SO ₂	Kg/h	0,380
H ₂ O	Vol %	17,87
N2	Vol %	72.04
O ₂	Vol %	3.74
CO ₂	Vol %	6.35

Table 2 – Exhaust features at engine outlet-

All following data have been calculated based upon Normal Operation 75% gas.

3.2 REQUESTED EFFICIENCY AT NORMAL OPERATION

- NOx = 80,45% [0,322_{IN}; 0,063_{OUT}]
- SOx = 70.0% [0,380_{IN}; 0,152_{OUT}]

The above efficiencies have been evaluated in the worst-case scenario. Of course, the same results in terms of removal efficiency can be achieved also in any other scenario.

Anyway, real removal efficiency of wet deSOx system will be much higher than the requested one, to avoid elemental sulfur formation in the following steps on treatment process.

3.3 CHEMICALS IN USE

- Caustic NaOH
- Sulfuric Acid H₂SO₄
- NaClO₂ (oxidizing agent)
- NaHS (reducing agent)

4. Wet Stage 1 (De-SOx)

This is a chemical-physical absorption unit where the acidic pollutants carried out by the exhaust are removed. Sulfur oxides, hydrogen halides, and any other acidic components are removed. The chemical in use is Caustic. Just as an example let's analyze one of the several reactions that happen at this stage:

(5) $SO_2 + NaOH \rightarrow NaHSO_3$

Acting opportunely on the operation parameters also the following reaction may take place in this stage:

(6) $SO_2 + 2NaOH \rightarrow Na_2SO_3 + H_2O$

With a similar mechanism, the other acids are also neutralized and removed from the exhaust.

With such a mass transfer from Gas phase to Liquid phase a gaseous pollutant (SO₂) is changed into a dissolved solids and carried over from the system through the liquid waste of the stage.

Pollutant	Inlet load (kg/h)	Abatement efficiency (%)	Outlet (kg/h)	Outlet on a yearly basis (kg/y)
SO ₂	0.38	* *	0.036	sent to stages 3 and 4
NO	NA	NA	NA	NA
NO ₂	0.03	* *	0.027 (sent to stage 3 and 4)	sent to stages 3 and 4

4.1 Performance of the wet stage 1 (De-SOx/We-NOx)

Table 3 – Performance of stage 1 –

4.2 Expected consumption of chemicals in wet stage 1

Chemical	Consumption (liters/hour)	Consumption on a yearly basis (m³/y)
NaOH (50% w) <mark>(*)</mark>	4 0,8 4.16	358

(**) Compare tabulated values in ATTACHMENT2

NaClO ₂ (20% w)	0.0	0.0
NaHS (45% w)	0.0	0.0

Table 4 – Expected consumption of chemicals in stage 1 –

(*) keeping the pH at low level 7.8 for lower absorption of CO2 (1.53 kg/hr only). With such pH value the neutralization is slower, but a much smaller consumption of caustic is ensured.

5. Wet stage 2

The main nitrogen oxides emitted during combustion processes are nitric oxide (NO), nitrogen dioxide (NO₂), and nitrous oxide (N₂O). Since the primary contribution in combustion processes comes from the first two, NOx is generally considered the sum of NO and NO₂. Other nitrogen oxides, such as NO₃ and N₂O₅, are present in much lower concentrations compared to the first two.

However, all the species mentioned above, when subjected to the We-NOx process, will be converted into atmospheric nitrogen. Specifically:

• NO and N₂O will be oxidized to NO₂.

This will occur through the following half-reactions:

(7) NO: $N^{2+} \rightarrow N^{4+} + 2e^{-}$

(8) N₂O: N¹⁺ \rightarrow N⁴⁺ + 3e-

To achieve the perfect completion of the reactions (7) and (8) a strong oxidizing agent must be used.

The kinetics of the reactions (7) and (8) are instantaneous so that at the exit of the second stage the residual NOx forms are: NO₂, NO₃, N₂O₅, which will be removed in the third stage.

Pollutant	Inlet load (kg/h)	Abatement efficiency (%)	Outlet (kg/h)	Outlet on a yearly basis
SO ₂	0.03	0	0.03	sent to stages 3 and 4
NO	0.29	* *	0.013	Sent to next stages
NO ₂	0.027	NA	0.45(*)	Sent to stages 3 and 4

5.1 Performance of wet stage 2

Table 5 – Performance of wet stage 2 –

(*) the increase is due to the conversion of NO to NO_2 in the reactor of stage 2

5.2 Expected chemical consumption in wet stage 2

Chemical Consumption (liters/hour)	Consumption on a yearly basis (m³/y)
------------------------------------	--------------------------------------

(**) Compare tabulated values in ATTACHMENT2

NaOH (50% w)	0.0	0.0
H ₂ SO ₄ (36%% w)	0.38	3.3
NaClO ₂ (20% w)	1.51	13.3
NaHS (45% w)	0.0	0.0

Table 6 – Expected consumption of chemicals in stage 2 –

6. Wet stage 3

In the third stage the residual NOx forms NO_2 , NO_3 , N_2O_5 are chemically reduced to gaseous nitrogen N_2 , through the following partial ionic reaction:

(9) $N^{4+} + 4e^{-} \rightarrow N^{0}$ (10) $N^{6+} + 6e^{-} \rightarrow N^{0}$

(11) $N^{5+} + 5e^- \rightarrow N^0$

N⁰ is the oxidation state of gaseous nitrogen. At the completion of this stage the We-NOx process will have given nitrogen back to the atmosphere as before the combustion reaction of fuel with air excess in the NOx source (as an endothermic engine or a furnace or oven). To achieve the perfect completion of the reactions (9), (10) and (11), a strong reducing agent must be used.

NOTE: the oxidizing and reducing agents are fundamental and have been chosen with accuracy, to avoid any undesired by-product to be produced during the process. The We-NOx process is Ozone-free, and no ozone is developed or produced during the process.

Pollutant	Inlet load (kg/h)	Abatement efficiency (%)	Outlet (kg/h)	Outlet on a yearly basis
SO ₂	0.03	99.99	traces	End
NO	0.013	NA	0.013	Sent to next stages
NO ₂	0.45	* *	0.018	sent to stage 4

6.1 Performance of wet stage 3

Table 7 – Performance of wet stage 3 –

6.2 Expected chemicals consumption in wet stage 3

Chemical	Consumption (liters/hour)	Consumption on a yearly basis (m³/y)
NaOH (50% w) <mark>(*)</mark>	223 68.58	1953 600.7
H ₂ SO ₄ (36%% w)	0.0	0.0
NaClO ₂ (20% w)	0.0	0.0
NaHS (45% w)	0.4	3.5

Table 8 – Expected chemicals consumption in wet stage 3 –

(*) Keeping the pH at 8.5 instead of 9 reduces the caustic consumption. The recommended value is pH = 9. However, it is possible to manage also with pH = 8.5 with a closer control.

(**) Compare tabulated values in ATTACHMENT2

7. Wet stage 4

This is a finishing stage where the eventual excess of reactants coming from the previous stages carried over by the exhaust (chemical mists, by-products etc.) is removed so to send the purified exhaust straight to the stack with no further pollutants except traces allowed by the regulations. The chemical in use in wet stage 4 is just caustic soda NaOH to keep the pH high enough to remove acidic traces carried over from the previous stages.

Pollutant	Inlet load (kg/h)	Abatement efficiency (%)	Outlet (kg/h)	Outlet on yearly basis	а
SO ₂	<0,001	-	<0,001	<0,1	
NO	0.013	NA	0.013	113,9	
NO ₂	0.018	* *	0.009	35,0	

7.1 Performance of wet stage 4

Table 9 – Performance of wet stage 4 –

7.2 Expected chemicals consumption in wet stage 4

Chemical	Consumption (liters/hour)	Consumption on a yearly basis (m ³ /y)
NaOH (50% w)	40,5	354.7
H ₂ SO ₄ (36%% w)	0.0	0.0
NaClO ₂ (20% w)	0.0	0.0
NaHS (45% w)	0.0	0.0

Table 10 – Expected chemicals consumption in wet stage 4 –

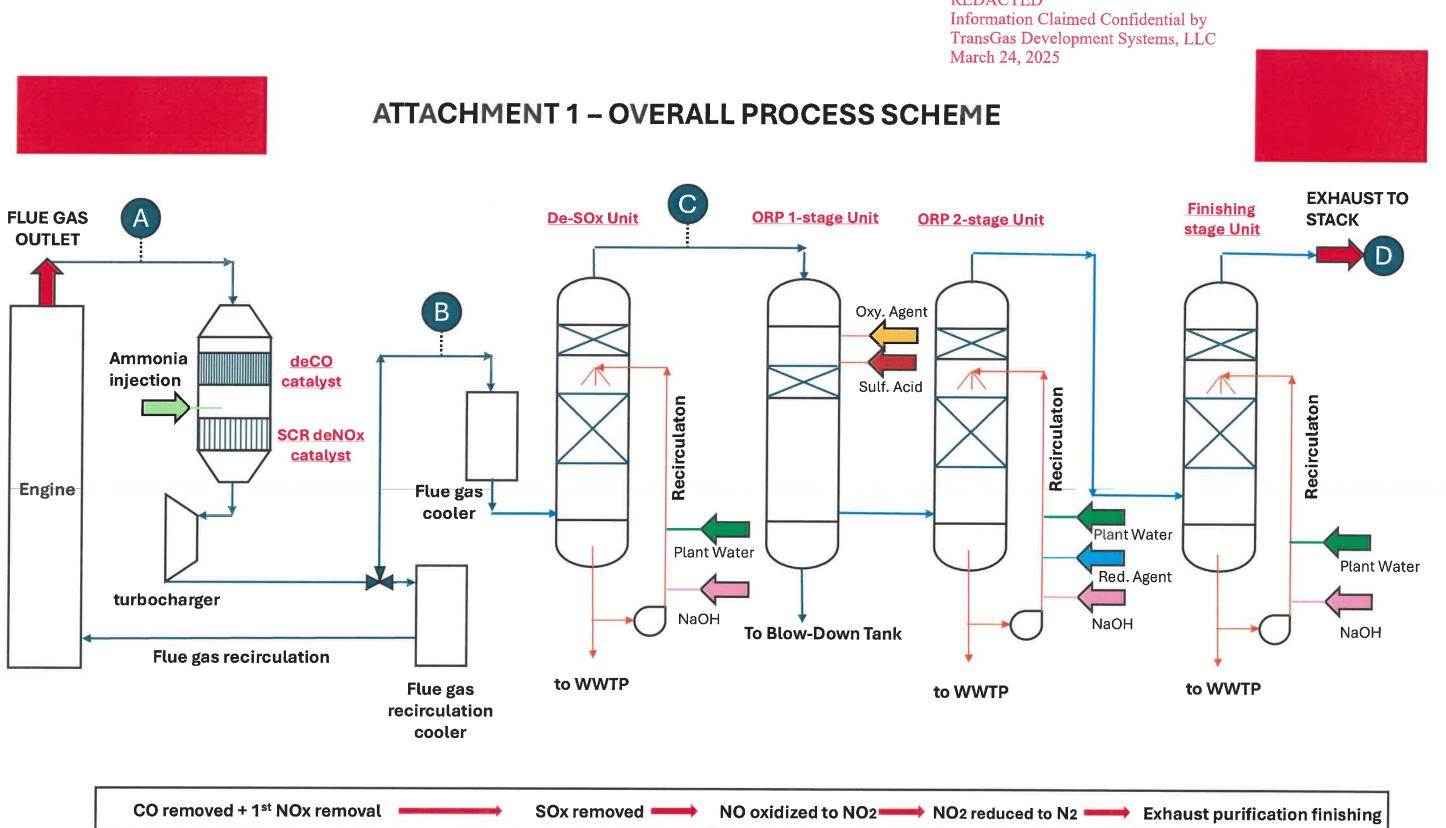

8. Total chemicals consumption

In the case described by tables 1 and 2, the foreseen overall consumption of the chemicals for all stages will be:

- Aqueous ammonia for SCR reaction: 13.2 lt/h
- Caustic soda (aqueous sol. 50% w): 304.3 113.24 lt/h
- NaHS (aqueous sol. 45%): 0.4 lt/h
- NaClO₂ (aqueous sol. 25%): 1.51 lt/h
- Sulfuric acid (aqueous sol. 36%): 0.38 lt/h

Warning: the above figure is indicative for chemical consumption and is based upon the preliminary input data obtained. It may undergo modifications during the design phase of execution.

AIR QUALITY PERMIT NOTICE

Notice of Application

Notice is given that TransGas Development Systems, LLC has applied to the West Virginia Department of Environmental Protection, Division of Air Quality, for a Construction Permit for the Adams Fork Harless Data Center Energy Campus located on 22 Mine Road near Holden in Mingo County, West Virginia. The latitude and longitude coordinates are: 37.753020 and -82.119050.

The applicant estimates the potential to discharge the following Regulated Air Pollutants will be: NO_x of 194.30 tons per year (tpy), SO2 of 9.93 tpy, CO of 205.62, tpy, VOC of 117.66 which includes fugitives of 0.31 tpy, PM of 193.69 tpy which includes fugitives of 7.16 tpy, PM10 of 187.96 which includes fugitives of 1.43 tpy, PM2.5 of 186.91 tpy which includes fugitives of 0.30 tpy, and total HAPS of 0.87 tpy.

Startup of operations is planned to begin on or about the 1st day of January 2027. Written comments will be received by the West Virginia Department of Environmental Protection, Division of Air Quality, 601 57th Street, SE, Charleston, WV 25304, for at least 30 calendar days from the date of publication of this notice. Written comments will also be received via email at DEPAirQualityPermitting@WV.gov.

Any questions regarding this permit application should be directed to the DAQ at (304) 926-0499, Extension 41281, during normal business hours.

Dated this the (Insert Date) day of March 2025.

By: TransGas Development Systems, LLC Adam Victor President 630 First Avenue, Suite 30C New York, New York 10016-3799

BUSINESS CONFIDENTIAL CLAIMS

Cover Document Confidential Information

This sample form contains each of the required elements for the cover document required under 45CSR31. The person submitting this form may wish to attach an additional page(s) to provide adequate justification under the "Rationale" section of the form.

Company Name	TransGas Development Systems, LLC	Responsible Of	ficial	Adam Victor, President
Company Address	630 First Avenue, Suite 30C New York, NY 10016-3799	Confidential	Name	Patrick Ward
		Information Designee in	Title	Senior Engineer
		State of WV	Address	7012 MacCorkle Ave, SE Charleston, WV 25304
Person/Title	Adam Victor			
<i>Submitting</i> Confidential	President		Phone	(304) 342-1400
Information			Fax	(304) 343-9031

Reason for Submittal of Confidential Information: Initial permitting.

Identification of Confidential Information	Rationale for Confidential Claim	Confidential Treatment Time Period
	Provide justification that the criteria set forth in § 45CSR31-4.1.a - e have been met.	
All Marked Confidential Information.	The information contained within the application is fully protected under non-disclosure and confidentiality agreements by all parties involved in the application process and design of the facility. See Page Q2 of Q2.	This information is to be maintained confidential. There is no timeframe for expiration of confidential treatment.
Г		
Responsible Official Signatu	re:	
Responsible Official Title:	President	
Date Signed:	3/24/25	

NOTE: Must be signed and dated in BLUE INK.

Provide justification that the criteria set forth in § 45CSR31-4.1.a - e have been met.

4.1.a. The claim of confidentiality has not expired by its terms, nor been waived or withdrawn;

The confidentiality agreements do not have an expiration date due to the nature of the information contained in the application.

4.1.b. The person asserting the claim of confidentiality has satisfactorily shown that it has taken reasonable measures to protect the confidentiality of the information, and that it intends to continue to take such measures;

The information contained within the application is fully protected under non-disclosure and confidentiality agreements by all parities involved in the original development of the processes, the design of the facility, and the permit application process.

4.1.c. The information claimed confidential is not, and has not been, reasonably obtainable without the person's consent by other persons (other than governmental bodies) by use of legitimate means (other than discovery based on a showing of special need in a judicial or quasi-judicial proceeding);

The information available herein is not available and is not to be made available to outside parties.

4.1.d. No statute specifically requires disclosure of the information; and

Applicant believes there are no statutes that require disclosure of the information.

4.1.e. Either--

4.1.e.1. The person has satisfactorily shown that disclosure of the information is likely to cause substantial harm to the business's competitive position; or

This is a unique facility with many parties involved in preparing and providing information on the systems. Release of this information could cause substantial harm to Applicant's competitive position in the market.

4.1.e.2. The information is voluntarily submitted information, and its disclosure would likely to impair the State's ability to obtain necessary information in the future.

The State should not disclose this information to anyone.
