MAINTENANCE AND SEEDING NOTES

a) At a minimum, inspections of all erosion and sediment controls will be conducted every 7 days and within 24 hours of a rain event of 0.5 inches or greater rainfall in 24 hours.

b) Except as noted below, stabilization measures shall be initiated as soon as practicable in portions of the site where construction activities have been temporarily or permanently ceased, but in no case more than seven days after the construction activity in that portion of the site has permanently ceased.

c) Where the initiation of stabilization measures by the seventh day after construction activity temporarily or permanently ceased is precluded by weather conditions, stabilization measures shall be initiated as soon as conditions allow.

d) Where construction activity will resume on a portion of the site within 14 days from when activities ceased, i.e., the total time period that construction activity is temporarily halted is less than 14 days then stabilization measures do not have to be initiated on that portion of the site by the seventh day after construction activities have temporarily ceased.

e) Areas where the seed has failed to germinate adequately (uniform perennial vegetation cover with a density of 70%) within 30 days after seeding and mulching must be reseeded immediately, or as soon as weather conditions allow.
